WEB SUMMIT 2026 · JOSE'S CONDUCTOR BRIEF

Your agents' first day through one door; three asks: the schedules, the CRM key, three questions

5 November 2026, 17:30 UTC, corrected 18:20 UTC after the reviewer (scheduled wake, the evening one; since brief 9, 12:25 UTC) · conductor@web-summit.jose

> From today your agents take work from your conductor and report back to it: dev, automation, the dashboard and vault already have. Three asks tonight: approve or change the faster schedules, decide on the team CRM and whose token drains an inbox lane, and answer three questions about the door. The 'today' list below is the start of your interview.

46	4 of 7	1.6 to 2x	2,331
commits by your agents today, before this brief	agents reported through the one door so far	today's tokens, for the faster schedules	page views drained (17:07)

For you to decide

1 ✅ **Approve: your agents' schedules (people/jose/schedules.md)**

Your conductor every hour 07:20 to 21:20 with the drain folded in; dev and helper every two hours; the designer at 10:40 and 16:40. About 99M tokens a day now, about 158M to 194M proposed (4.8M now, 7.3M to 10.3M proposed, without cache reads). Two choices of mine: briefs twice a day, and the evening brief at 20:20. On a yes, each changed scheduled task, and the dashboard's and vault's too, gets the kit's current prompt (your watcher's A-06: their stored prompts are older than the kit): a two-minute step in each agent's session.

- ☐ yes, as proposed
- ☐ a cheaper variant (your conductor every two hours, about 28M a day less; or dev every three hours)
- ☐ not now

Conductor's recommendation: Yes as proposed, for one day. The accountant sees only the runs that commit (an idle run writes no ledger line), so on Saturday I add the idle runs at their estimate of about 1M each, and you keep it or cut it.

2 🗝 **Decide: the team CRM, a CRM agent of your own, and whose token drains an inbox lane (conductor@web-summit.dinis's notes, at Dinis's word, 14:41 to 17:15)**
Checked: the private CRM's key is sealed to my current key, signed by Dinis's conductor's published key (a tampered copy fails the check), it opens, and it is the key of the private CRM vault (5n0aocvz). Your own copy is on your For-you panel, sealed to your site key. Its second layer is paused at Dinis's word (bc8e2187), so the vault key reads every record. Three things wait on your word: (a) using the CRM: I record what we learn about companies there and tell Dinis's conductor I have opened the key, as its note asks; (b) a CRM agent of your own, crm@web-summit.jose, as Angelo and Silvio have (01da9602): you open its session, and I give it the key from my sealed copy; (c) an inbox lane for me, for receiving keys: whoever makes it, draining it and pushing CRM records need an SG/Send access token, and Dinis has said every agent should have its own (1b4f242a, 17:51); until he issues one, it is your token at your yes, or your vault agent drains it, as it drains its own lane.

- ☐ yes to the CRM and the lane, drained by your vault agent until your conductor has its own token
- ☐ the CRM only
- ☐ the CRM, the lane and a CRM agent
- ☐ not now

Conductor's recommendation: Yes to the CRM and the lane, drained by your vault agent until your conductor has a token of its own; a CRM agent once the CRM proves useful to you.

3 ❓ **Three questions about the one door**
(a) Should work Dinis gives your agents directly also come through your conductor, as a task file? (b) May the reviewer's ROLE.md and dev's README say 'tell the conductor' on a hold, as the kit now does? (c) Should your command centre's own 'Needs me now' list (people/jose/app/kanban-core.js) show your Actions list instead?

- ☐ yes to all three
- ☐ one by one

Conductor's recommendation: Yes to all three: one door in, one list out.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
5 Nov, about 12:30	*“i also want to create a sales coach agent, his goal is to help train me on sales pitch for RiskMandate”*	sales-coach@web-summit.jose set up (its role, its prompt, a row in agents.json); you started it, and its key is on the keys page v0.2.551; people/jose/sales-coach/ROLE.md	DONE
5 Nov, about 12:50	*“how do you recommend doing about the transcripts of the meetings? should i create a specialized briefing transcript agent?”*	Recommended no new agent; on your 'yes, go', an item on the 18:00 stand-up and a debrief step in my wake v0.2.562	DONE
5 Nov, about 13:05	*“Change my 18:00 item on Meet transcripts (WS-96/98): no n8n.”*	The item now proposes that the record's writer reads the transcript in Drive through its Claude connector; my debrief covers only your decisions and follow-ups v0.2.565	DONE

5 Nov, about 13:55 to 14:15	*“Your narrower debrief step is right... Both open questions in the 18:00 transcripts item are already answered... Transcripts for me, without WhatsApp... Reading them, for my debrief only”*	Both questions marked answered (7e12751); a suggestion to Dinis on WS-98 (share the folder once, view-only); your rules in the kit; the test below v0.2.569, v0.2.570, v0.2.574	DONE
5 Nov, about 14:27	*“I stop being the middleman between my agents. You are my only door.”*	The one door: the protocol, the rule for all seven agents, the Actions list kept by me, the schedules proposed (ask 1) v0.2.586; people/jose/tasks/README.md	DONE
5 Nov, about 17:15	*“One-door test: give dev a small task through a task file: 'list the open WS issues where Jose is the owner, one line each, in your Report'. Tell me in my brief when dev's Report is in.”*	The task is out; dev runs next at 09:30 tomorrow (or sooner if you open it); the first brief after its Report says it is in people/jose/tasks/2026-11-05-dev-jose-open-issues.md	
5 Nov, about 17:20	*“Dinis sent me a msg about the sgit vaults, can you verify”*	Checked the vault claims addressed to your agents (ask 2). One pattern to know: since 16:39, commits by Dinis's conductor quote Dinis's word 20 to 65 minutes after they were made (six commits, and four more at 17:36), so read their times as approximate. Your message itself I have not seen: paste it and I check it line by line. this brief, ask 2; commits 988aeaff, 225a63d9, 01da9602, dc8e2779, 557c18e5, bc8e2187	

Today, for your interview

- What your agents did (46 commits before this brief): your conductor 21 (briefs 8 and 9, your answers recorded, the sales coach, the transcripts item, the one door, and overnight your QR codes and run sheets); the watcher 5 (the whole team, now reporting to me); the dashboard 5 (your page as one action list, then its Actions section handed to me); dev 4 (two n8n guides, WS-41's counts, the one door taken up); the designer 4 (your command centre overnight, your navy wish); vault 2 (its schedule; at 17:45 its one-door Report, after draining a signed WS-120 test from Angelo's vault); the sales coach 2 (its key); automation 2 (WS-74's note without any key); the helper 1 (its schedule; its scheduled runs fired at 08:50 and 14:51 with nothing to commit, by your watcher's record).
- What you decided, in your words: 'Record them' (your eight answers, about 10:30); 'i want dark blue, please go', then navy 'if it's clearly different from Nimay's royal blue and Dinis agrees; otherwise keep orange'; 'i also want to create a sales coach agent'; 'yes, go' and 'no n8n' on transcripts; 'You are my only door'.
- What you seemed to learn, to check in your interview: from your question at about 11:50 and my answer, that Claude's Managed Agents hosts agents while RiskMandate governs them; that the simplest transcript path leaves the file where Google puts it; and that being the middleman costs you more than faster schedules would cost in tokens.

The one door, first day

- dev (15:36), automation (16:25), the dashboard (17:35) and vault (17:45) have reported through it; dev and automation retired their own lists of what waits on you, and the dashboard handed its Actions section to me. Their asks are on your Actions list (WS-39's set-up, WS-41 steps 2 and 3, the broadcast look, the dashboard's standing question, the Agent policy explorer's key, an optional n8n screenshot). The designer, the helper and the sales coach report at their next run.
- Handed out: a task for vault to publish the WS-74 count after each drain (automation's request, on your answer 3); a task for vault to answer Angelo's WS-120 test (vault asked for one, rather than replying to another person's agent); and your test task for dev.
- Older task files closed where the record shows them done.

Your transcripts folder (the Drive test)

- The connector works in a scheduled wake. In your folder 'RiskMandate team meetings transcripts', titles, dates and owners only: three meetings (3 November 18:03, 4 November 14:51, 4 November 18:10), each as .txt, .md and .json, and three .zip files, skipped; all yours, added today at 14:16. No transcripts folder from Dinis yet (the WS-98 suggestion waits for him). From my next wake I read them for your debrief only.

Your watcher (17:15) and the rest

- High, third run: three email-address lines in content/family-riskmandate-agent.md, a page by Dinis's conductor, with security. Medium: an email-rule line on a public session branch of Silvio's outreach agent. Your agents' 14 commits since 12:15 all carry the reviewer's line.
- The site's gate failed for every push from 18:00 (a link on Indi's today page to a stand-up that does not exist). I made the one-line fix your kit allows for a broken build, and told Indi's agents.
- Your navy wish: Dinis's designer put navy beside Nimay's blue on /print/#next, and reads it as apart from Nimay's but close to Dinis's black at a distance; Dinis decides.
- The ABPs now record your one-door rule and the sales coach (54fee4ce).
- Page views: 2,331 drained by 17:07, most of them the night's automated sweep (brief 8); the busiest hour since the morning was 16:07 (73); the new signature findings are all automated browsers.

Next

- 07:20: the accountant's run and brief 11; your interview write-up turned into your pulse, your decisions and tasks, if it is in your folder.
- The first brief after dev's Report: the one-door test's result, and how long it took.
