WEB SUMMIT 2026 · INDI'S CONDUCTOR BRIEF

Evening: still no newsroom access, your key is due at 18:00

4 November 2026, 17:25 UTC (scheduled wake; since brief 7, 12:45 UTC) · conductor@web-summit.indi

> Two things need you before the 18:00 stand-up: your site key (WS-136) and a look at the newsroom decision. Access to the newsroom repository is still not granted, so the patch is still a patch, and the live newsroom is still the old v0.1.2 look. Dinis opened an incident about why WS-145 was buried. Nothing is decided here.

L6	0	1	18:00
your level: 9 of 9 steps (your mentor, 14:41)	pushes possible to the newsroom repository (access still refused at 17:20)	newsroom decision for you at 18:00 (WS-141)	WS-136 due: your site key and one signed message

For you to decide

1 **Add your site key and send one signed message (WS-136, due 18:00)**
Your mentor's 14:41 note says the same. Open the link or the QR I sent you this morning. Then send one message from the Feedback pane. I record it on WS-136.

- [ ] now
- [ ] after the stand-up

Conductor's recommendation: Now: it is the last open item on your setup, and it is due in 35 minutes.

2 **At 18:00, ask Dinis for push access and a yes on the patch (WS-141, WS-145)**
Dinis has opened WS-151 to find out why WS-145 sat unseen on his dashboard. Both are on his list. The patch still applies cleanly to the newsroom's dev, and the live site is still the plain v0.1.2 skeleton.

- [ ] raise it yourself at 18:00
- [ ] message Dinis now
- [ ] leave it to his agents

Conductor's recommendation: Raise it yourself at 18:00 if you are there: it is the one thing his agents cannot do for you.

3 **Confirm your card-testing vault key is stored safely**
The synthetic-users agent handed over its work to me (WS-142). It sent you the key to vault nnsikio4 as a file in chat. The copy it held dies with its session. Keys never go in the repository.

- [ ] stored in my password manager
- [ ] send it to me again
- [ ] not needed

Conductor's recommendation: Store it in your password manager now.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
4 Nov, about 13:00 UTC	*“Can you add a task to his dashboard to say that he needs to give me access to his repo”*	WS-145 on the board, for Dinis. It then sat buried on his dashboard for hours. He opened WS-151 at 16:40 to find out why, and his dashboard now shows an 'Only you can do this' block first. board/WS-145, board/WS-151	WAITING
4 Nov, about 13:00 UTC	*“is it in his command centre? / is there a link / whats the task called?”*	Yes, linked, and named WS-145. this chat	DONE

1. What happened since brief 7

- Your two synthetic-user sessions ran in parallel. You kept one and dropped the other. Its handover to me is in people/indi/synthetic/HANDOVER.md (60cb10e). I carry WS-142 on, and your agents.json says so.
- WS-142's next step, run 3 of the card tests, waits on the /meet/ page (WS-146), which is Dinis's to change, and on where its vault key goes.
- Vicky's desks moved to the newsroom repository (16269c3), so her agents are working there already.
- Still open from brief 6: WS-144 asks whether Dinis's designer agent agreed to your designer writing in its folders, and who pressed merge on two of its changes.

2. From your mentor (14:41)

- One step left, your key on the site, by 18:00.

Next

- 18:00 stand-up: the newsroom decision (WS-141) and WS-145.
- The moment you are granted access, I test a push to the newsroom's dev and apply the patch.
- Tell me 'acknowledge' when you have read briefs 1 to 8.
