WEB SUMMIT 2026 · JOSE'S CONDUCTOR BRIEF

Summit day one: page views are being lost now; Dinis is back online

9 November 2026, 07:26 UTC (scheduled wake; since brief 17, 17:20 UTC yesterday) · conductor@web-summit.jose

> All five page-view lanes are full (5,000 pending at 07:26), so the site's page views are being lost from some time overnight until Dinis drains them or issues the tokens. Dinis's account came back at about 20:00 last night; his conductor relayed your token ask to Dinis at 20:29 (its brief 36, ask 1), not yet issued. Seven of your eight wake pointers are saved; only dev's is left, and the trial starts when it is.

5,000
page views waiting: all five lanes full (07:26); new views are being lost

0 of 3
tokens issued (conductor, vault, crm)

7 of 8
wake pointers saved; dev's is left

0
interview write-ups in your folder (three nights)

For you to decide

1 🔑 **Now: Dinis, one drain today or the tokens**
The lanes have been full since overnight, so every page view from today's visitors is lost until someone drains. Dinis's conductor relayed your ask to Dinis at 20:29 yesterday (WS-170, its brief 36), but no token is issued yet. One line from you to Dinis at the stand: drain the page-view lanes once today, or issue the conductor's token so I drain them every hour.

- [ ] I ask Dinis this morning
- [ ] accept losing page views today

Conductor's recommendation: Ask Dinis this morning, in person.

2 ⏱️ **Dev's pointer, with its new time, and its fresh session**
The last pointer left (Actions row 0). Start dev's fresh session from the kit's start prompt plus 'Read people/jose/dev/HANDOVER.md first' (row 30) and point its task at it with the new time, every two hours 07:30 to 21:30. The trial's first full day is then tomorrow.

- [ ] today
- [ ] after the summit

Conductor's recommendation: After the summit, unless you have 5 quiet minutes: dev's work is not urgent this week.

3 ✅ **The Agents board's data (row 5), when you have a minute**
The board is live with last and next runs; the rest waits on your yes to the designer's small data.mjs addition (people/jose/design/agents-board/data-addition.md).

- [ ] yes
- [ ] after the summit

Conductor's recommendation: Yes, if you want the board complete for the stand; otherwise after the summit.

Overnight

- Page views: lane 5 held 603 at 21:20 with 397 places left; all five lanes were full by 07:26. I last counted at 21:20 (my last wake of the day), so I cannot say when the lanes filled.
- Your watcher (22:15): automation's and the dashboard's pointers saved at 20:11 and 20:12; only dev is left (A-06). Dinis's account back after 27 hours (A-21 partly closed).
- Your agents: no commits since 21:20 apart from the watcher. I closed the watcher's A-06 task file: its runs did it, per agent (C39).

The accountant: 8 November, still a baseline day

- From the ledgers: about 104M tokens, 7.9M of them not cache reads, about $61, about the same as 7 November (about $60 with the writer priced at Opus rates). The costliest: the watcher ($19.86), dev ($12.33), the designer ($11.18, its first two scheduled wakes), the dashboard ($5.54).
- The watcher still ran on Opus all day: its Sonnet switch (row 2) has not happened. The helper's ledger has one line for 8 November though it woke every two hours from 13:09: its other wakes measured nothing (likely they found nothing to do and stopped).

The team overnight

- Dinis's conductor: back at 20:29 ('8 wakes missed'), with your tokens as ask 1 in its brief 36 to Dinis; not yet issued.
- Vicky's and Angelo's agents most active; Indi's prompter: an FAQ and a team app brief.
- For you, from Dinis (650bffa0, 23:52, WS-199): which of the three apps do you want your agents on: the event app (PT News, public, light), the team app (private data, never in a store) or the RiskMandate app (public demos for customers)? Your answer goes to his conductor in a commit; tell me which and I send it.
- Your watcher (07:15 today): no security review by Dinis's security agent for about 44 hours (High, for Dinis).

Next

- Every hour, 08:20 to 21:20: the lanes counted and drained the moment a token is sealed to me.

Where this came from

telemetry_drain.py --dry (21:20, 07:26) · git log origin/dev since 21:20; watcher 5c3e12e3; conductor@web-summit.dinis 230d1ab6, 650bffa0 · data/sealed/agents/ (no token sealed) · your Drive folder (titles only: no new files)
