WEB SUMMIT 2026 · TOKEN ACCOUNTANT

Brief 5: the first real numbers, and long sessions

8 November 2026, 17:40 UTC (window: since brief 4, 7 November 17:37 UTC) · accountant@web-summit.indi

> 1,073,332 fresh tokens measured across dev, dashboard and me; the biggest saving is a fresh session per wake, since each wake first re-loads 200,000 tokens or more of old context, about 900,000 a day (my estimate).

1,073,332	10,562,441	3 of 11	~900,000
tokens today (fresh input + output + cache writes)	cache reads today	agents measured of agents running	saving per day from A6 (my estimate)

For you to decide

A6 **A fresh session per wake for dev, dashboard and me (replaces A3 and A5)?**
Each call carries 211,933 to 329,982 tokens of old context. dev's quiet 15:38 wake: 204,461 of 206,199 fresh was re-loading; dashboard 216,426 of 219,031; me 132,612 of 137,217. Old: the task fires into one standing session. New: a new session each firing (create_new_session_on_fire), same prompt, new key per CLAUDE.md. Saving about 900,000 a day if a fresh wake starts near 40,000 (estimate).

- [ ] Yes, all three
- [ ] Me first, then the others
- [ ] No

Conductor's recommendation: Yes, all three

A4 **Angelo's workload view (brief 3)?**
Still open. Angelo's ledgers are on the team page too.

- [ ] Yes, once
- [ ] No

Conductor's recommendation: Yes, once

A2 **The persona model test (brief 1)?**
Still open. dev ran one wake on Sonnet 5.5 today (pass), a first data point.

- [ ] Yes, test before run 3
- [ ] No

Conductor's recommendation: Yes, test before run 3

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE

8 November, Indi (via conductor@web-summit.indi, 855c61df)	*"the token-efficiency ABP for every agent, and its rollout"*	A1 in effect for dev and dashboard; three-wake check under way. /abp/token-efficiency/	IN PROGRESS

1. Ledger

AGENT	WAKES	FRESH INPUT	OUTPUT	CACHE WRITE	CACHE READ	SUB-AGENT TOKENS	PER WAKE (TREND)	PASS RATE
dev@indi	3	55	28,751	468,425	7,372,403	219,853 fresh; 961,022 cache read	239,028 (first)	3/3
dashboard@indi	1	13	2,592	216,426	1,635,297	0	219,031 (first)	1/1
accountant@indi	1	8	4,597	132,612	593,719	0	137,217 (up from 128,715)	1/1
8 other agents	0	-	-	-	-	-	-	-

2. Biggest three savings

- Long sessions (A6): 211,933 to 329,982 cache reads per call for dev, 233,613 for dashboard; most fresh tokens are cache writes re-loading after hours idle.
- Quiet wakes: dev's 15:38 wake changed nothing and cost 206,199 fresh.
- Sub-agents: dev's 3 review helpers used 207,911 fresh; shorter briefs next.

3. Model tests run

None (A2 open). dev's 15:38 wake ran on Sonnet 5.5 and passed.

4. Agents not yet measuring

Told to their conductor, per the role: conductor@web-summit.indi itself (9 commits, no line), designer, messaging, factory, builder, ux, journalist, synthetic. social: asked today.

5. Data notes and 6. My own use

Lines since 7 Nov 17:37 UTC. Context per call = cache reads over calls. The 40,000 fresh start is an estimate. New in my role: a daily sealed report to the conductor's inbox (sent today) and the team page (next wake). My use: brief 6.

Next

- 9 November: brief 6, the team page, three-wake checks.
