WEB SUMMIT 2026 · JOSE'S CONDUCTOR BRIEF

The evening before the summit: your Agents board is live; one yes for its data; page views fill up tonight

8 November 2026, 17:20 UTC (my first wake from your re-saved pointer; since brief 16, 07:20 UTC) · conductor@web-summit.jose

> Your designer built the Agents board at 16:51, on its first scheduled wake: one row per agent at the top of your command centre. Three of its columns wait on one yes from you (a small build-time addition, ready as a proposal). My wake is now hourly from your re-save, and I switched off the separate drain task. No token has arrived: page views could fill the last lane tonight, around 20:00, at the afternoon's pace.

3,954
page views waiting (17:20): lanes 1 to 3 full, lane 4 at 954; 1,046 places left

0 of 3
tokens issued (conductor, vault, crm); Dinis's agents silent since 21:52 yesterday

5 of 8
wake pointers saved (dev, automation and the dashboard still old)

1
Agents board live (16:51)

For you to decide

1 🔑 **Tonight: Dinis, the tokens or one drain**

Lanes 1 to 3 are full and lane 4 is at 954. At this afternoon's pace (up to 367 an hour) the last lane fills around 20:00 tonight, and page views after that are lost until someone drains. The reminder is on WS-170 (14:22); your word to Dinis is what moves it.

- [ ] I message Dinis now
- [ ] accept losing views tonight

Conductor's recommendation: Message Dinis now: one line, tokens or one drain.

2 ✅ **Yes or no: the Agents board's data (row 5)**

The board shows last run, next run and on demand. Doing now, Waiting on me and the red light need a small addition to people/jose/app/data.mjs, code the build runs (WS-133): it reads your task files, the watcher's actions and your Actions list at build time; nothing outside the repository. The exact code is ready: people/jose/design/agents-board/data-addition.md.

- [ ] yes, apply it
- [ ] after the summit

Conductor's recommendation: Yes: it only reads your own files, and the board is then complete for the summit.

3 ⏱️ **Re-save dev's pointer (with its new time) to start the trial**

Mine saved at 16:49, so I wake every hour now. Dev's, automation's and the dashboard's are still the old text; the trial starts once dev's new time (every two hours, 30 7-21/2) is saved. If you start dev's fresh session (row 30), point its task at it with the new time in one go.

- [ ] tonight
- [ ] after the summit

Conductor's recommendation: Tonight, with dev's fresh session: 5 minutes.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
8 Nov, about 16:45 (C41)	*"Yes to trimming the Actions list ... The runner pattern ... and a lighter interview ... write each as a one-page proposal there for after the summit; change nothing now."*	Ten rows kept, nineteen parked unchanged; two proposals in people/jose/proposals/; the helper's and designer's schedules recorded e018f443	DONE
8 Nov, about 14:15 (C40)	*"remind Dinis's side of the tokens; Jose will also raise it with Dinis himself"*	Reminder on WS-170 at 14:22; no token yet e539bba2	WAITING

What I did without asking you (C39), and at your word

- At your word (C30): with my wake now carrying the drain sentence, I switched off the separate hourly drain task (17:21). I disabled it rather than deleting it, as a precaution: the tool warns that deleting a task deletes the sessions it started, and this one fires into my own session (it did not start it, but off is reversible); say 'delete it' and I will, or leave it off.
- The C33 rule: agents.json and the kit now show my hourly wake and no drain cron; the helper's and designer's times recorded at 16:48.
- Actions row 0 updated: mine is saved, so it lists dev, automation and the dashboard.
- Correction to my 16:40 report: you had pasted five pointers around 13:00; I had not re-checked since 12:20.

For your interview: today

- What your agents did: the designer built the Agents board; the helper and dev wrote handover files for fresh sessions; dev's handover was held once by your reviewer (a contact-check failure) and passed on re-review; vault counted its lane; I sent Dinis the token reminder and trimmed your Actions list.
- What you decided: the core schedules (five of eight saved); trim and park the Actions list; keep the Agents board with the designer; keep waiting on tokens and raise them with Dinis; two proposals for after the summit.
- Still open: Dinis and the tokens; the board's data yes; dev's pointer and fresh session; the helper's fresh session; vault's passphrase; the writer's JW1; your site key and demos on your phone; dev's pre-read of Angelo's drafts.
- What you learned today, in your words.

The rest of the team

- Dinis's agents: none has committed since 21:52 yesterday (your watcher's A-21, third run).
- Angelo: the hexagon app, a live 3D agent graph, and Dinis's 'of course' to listing him as a contributor on PrompTugal.news. Silvio: his CRM pushed both CRMs with his own token, at his word. Vicky: company-page tests with synthetic readers. Indi: a team token-efficiency page.
- For observability@web-summit.dinis, from the designer's report: the published agent log (latest/agents.json) is from 7 November 16:48, so the board shows no amber yet; the 507s it saw in the browser are the full page-view lanes 1 to 3: views still go on to lane 4 (counted at 17:20), so tonight's count is right until lane 5 fills.

Next

- Every hour now, 18:20 to 21:20: the lanes counted at each wake; a line to you only if something changes. The dashboard agent's 'My agents' line is now due (the board is live); with the drain cron gone, the designer can give my row its amber rule (C33, 2). 07:20 tomorrow, the summit's first morning: the brief.
