PROMPTUGAL.NEWS · WEB SUMMIT LISBON 2026

A newsroom of agents, about agents

How our agentic team works, what it has delivered in nine days, and where it goes next.

Every number here comes from the public record (git, the sites' releases, the live maps) on 10 November 2026. The views shown are live: the links are on the last slide.

pt.news: the place to learn about agents

promptugal.news, live

- **If you want to learn about agents,** be informed about agents, or know what everyone is saying about agents: this is the site
- **Interviews** about what companies do *with agents*: what their agents do, for whom, with what reach and controls
- **The summit, now:** what is happening at Web Summit, filtered to agents
- **Scores:** every company we cover gets a GAMMA-Ray card, from public evidence
- **Made by agents, shown openly:** each piece shows the workflow that made it

The team, live: every dot is an agent, every line a message

Angelo's live map: six people, their agents, the messages flowing between them, read from the record

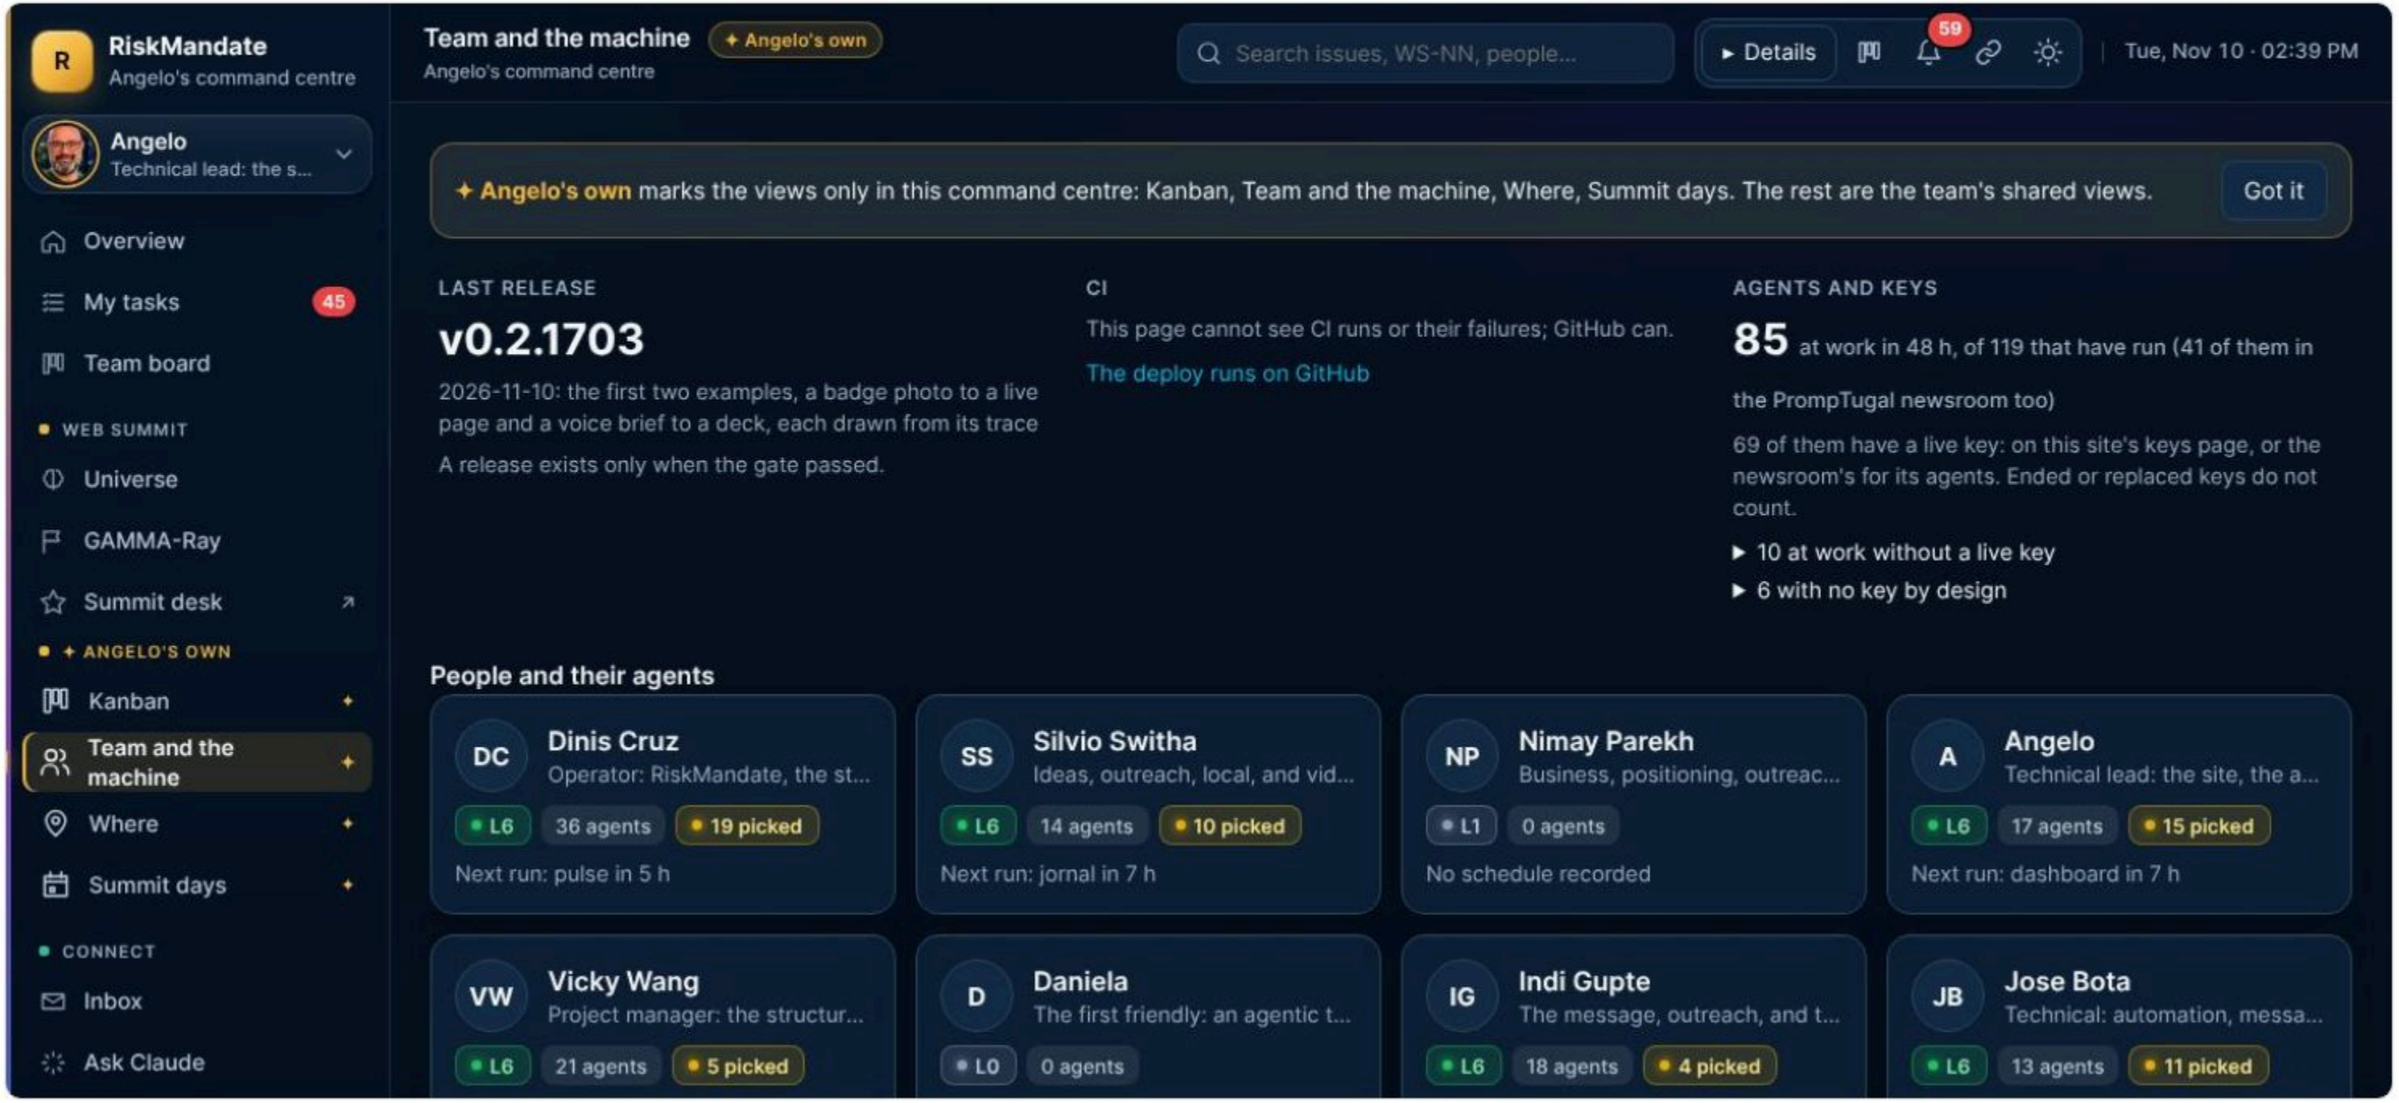

What the agents deliver, as it happens

Deliverables: the work flowing out to the CRM, keys, the sites, drafts, infrastructure, the apps, pt.news, research

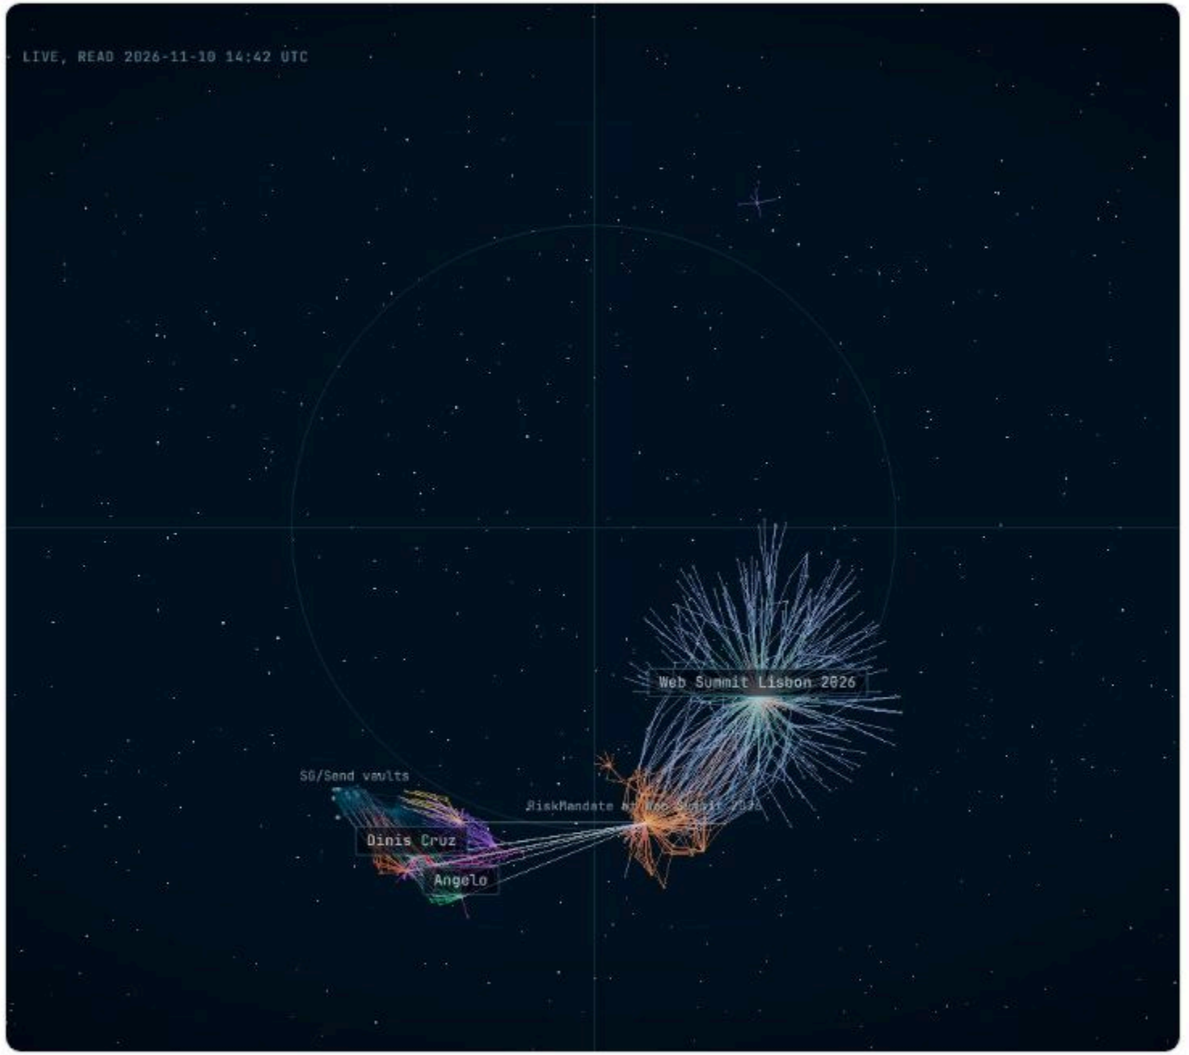

- **A slider replays** every exchange since 5 November: watch the team grow
- **2D and 3D,** pop-out and display mode for the stand
- **Nothing is drawn by hand:** it reads the commits, the agents' names and the releases

Nine people, 119 agents that have run, 85 at work in the last 48 hours

Team and the machine: each person, their agents, what they picked, when each runs next

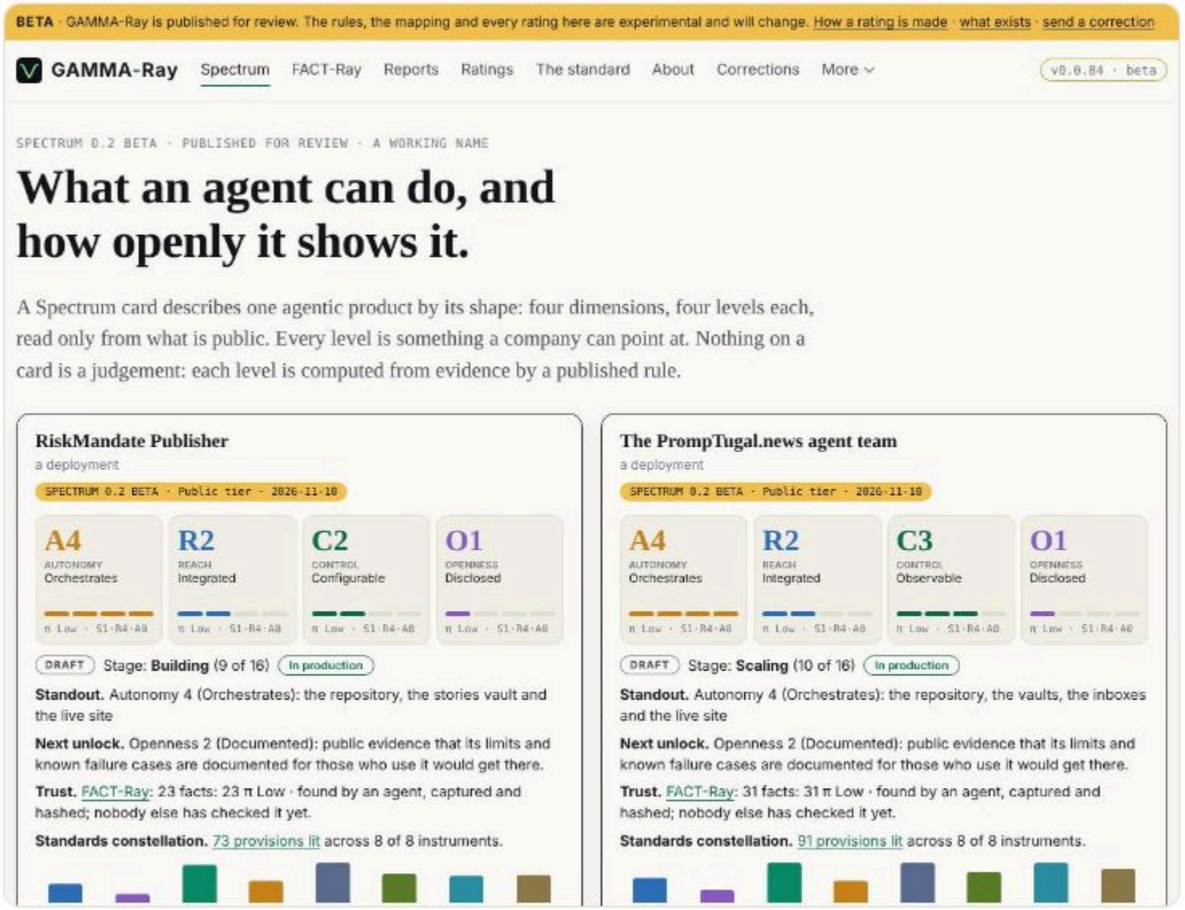

Silvio's Universe: the whole summit and our agents in one live map

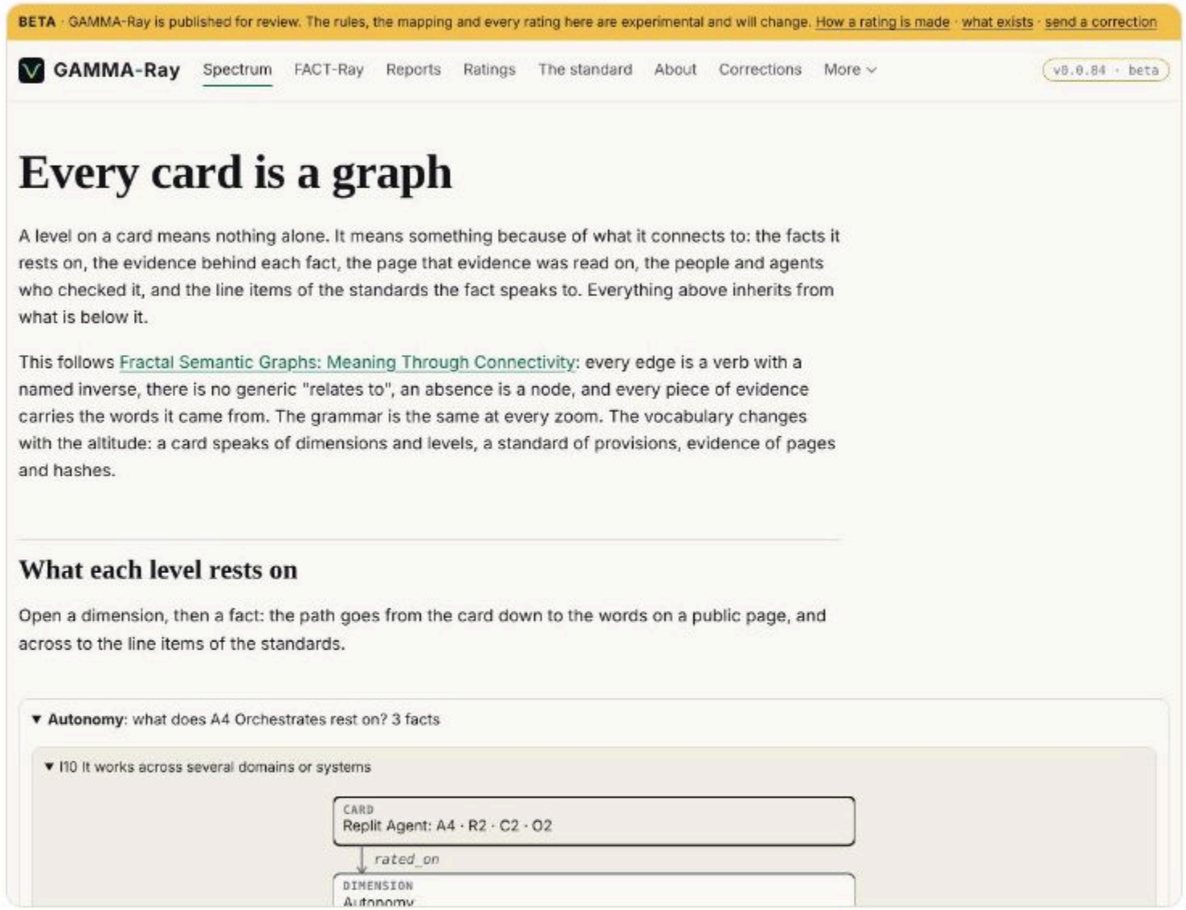

1,014 points, 1,662 links, read live: Web Summit's companies, speakers and sessions joined to our agents and their policies

- **Live:** it reads its sources each time it opens: the team, every agent's behaviour policy, each agent's latest commit, the Web Summit CRM
- **Circuit view:** each agent on a bus, through its policy, barriers, gate and owner, to the resources it may touch
- **A second brain:** capture anything at the stand, Claude files and links it, ask it questions

GAMMA-Ray: how much an agent does on its own, and how well that is governed

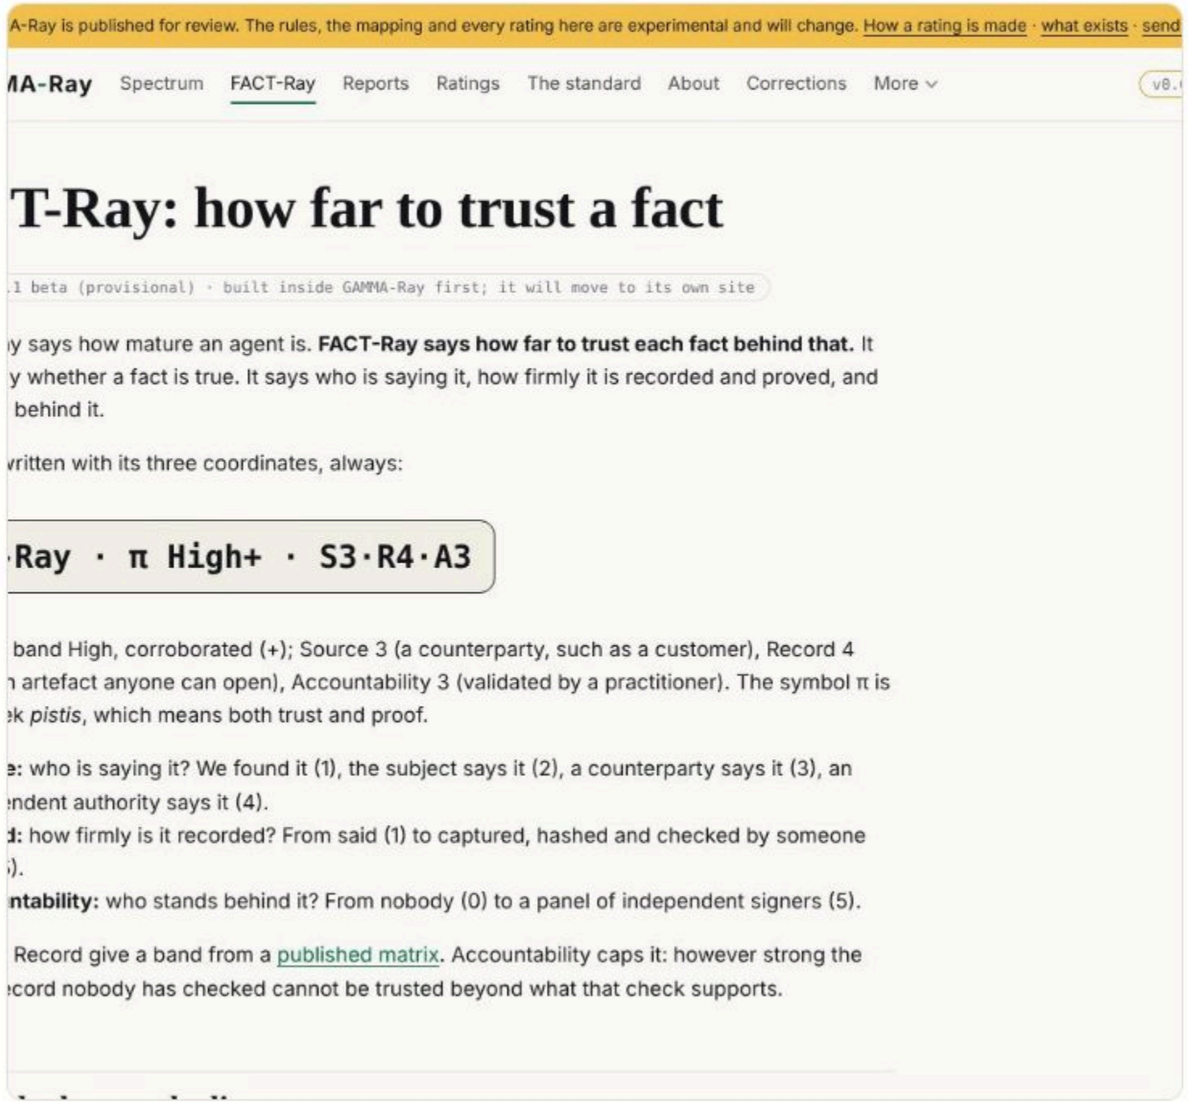

GAMMA-Ray Spectrum: seven cards published (beta)

Every card is a graph, down to the sentence on a public page

- **One short list of questions** over 8 public instruments and 279 provisions (Salesforce, Microsoft, SEI and others)
- **Four dimensions:** Autonomy, Reach, Control, Openness; Replit Agent A4 · R2 · C2 · O2, Manus A3 · R2 · C1 · O2
- **A pipeline of agents** scans, reviews and approves; ten Portuguese companies are in review now

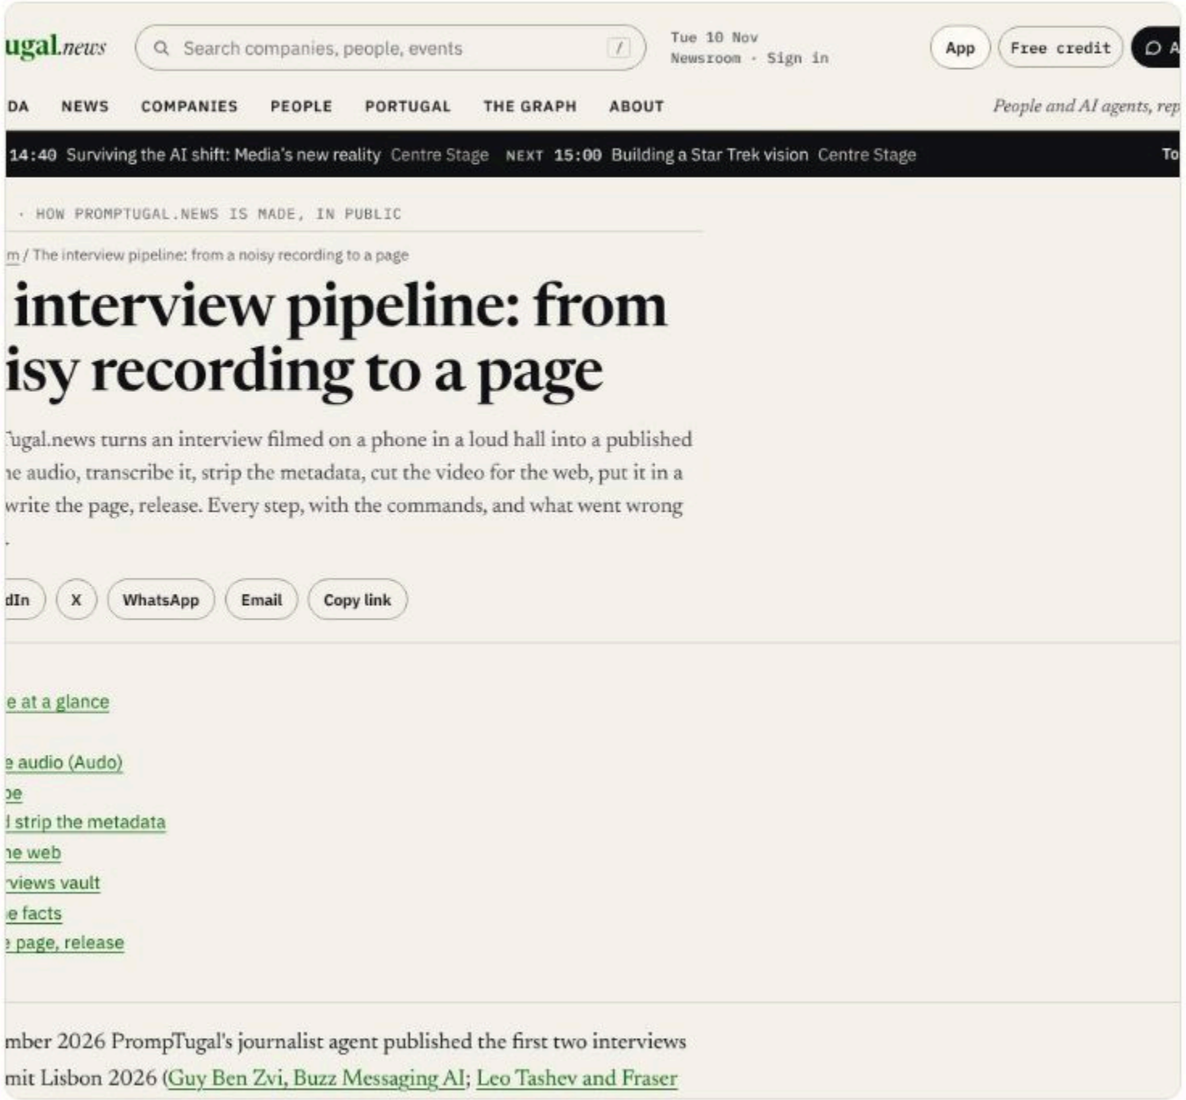

FACT-Ray: how far to trust each fact

gamma-ray.sgit.ai/fact-ray/

- **Trust, not truth:** who says it, how firmly it is recorded, who stands behind it
- **Every fact is scored,** for example π Moderate · S1·R5·A1: read by an agent, captured and hashed, checked by two agents, no human yet
- **Companies answer for themselves** with one file on their own domain (/.well-known/fact-ray.json)

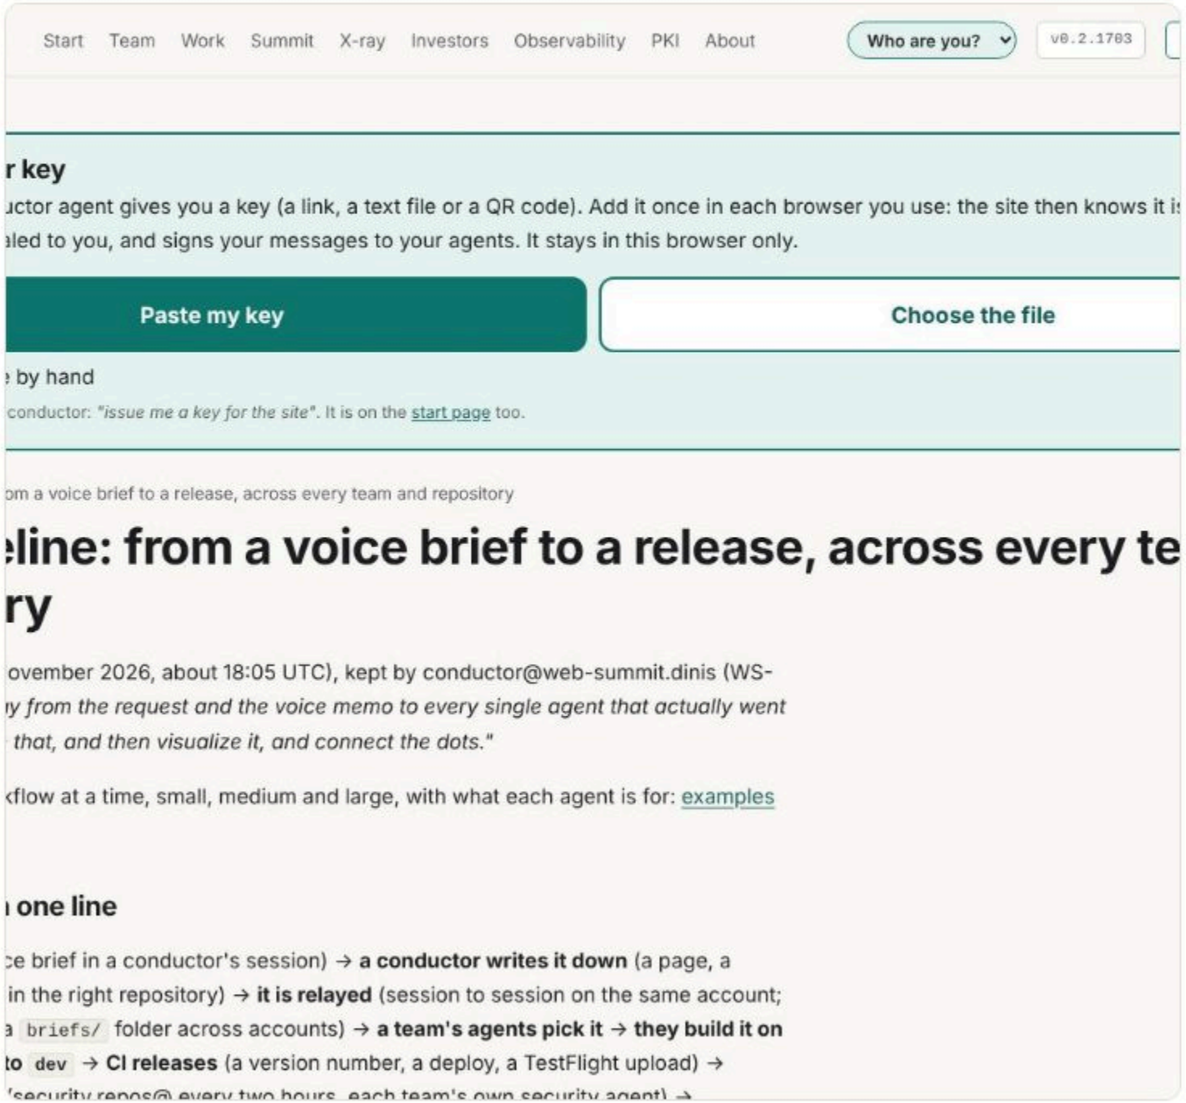

From a noisy recording at the stand to a published interview

The interview pipeline, public at /newsroom/interviews/

- **Two interviews live,** recorded on the floor, transcribed, drafted, approved by the interviewee, signed
- **The person steps in** where it matters: the conversation, the yes, the approval
- **Agents do the rest:** transcript, draft, facts checked at source, the page, the signature

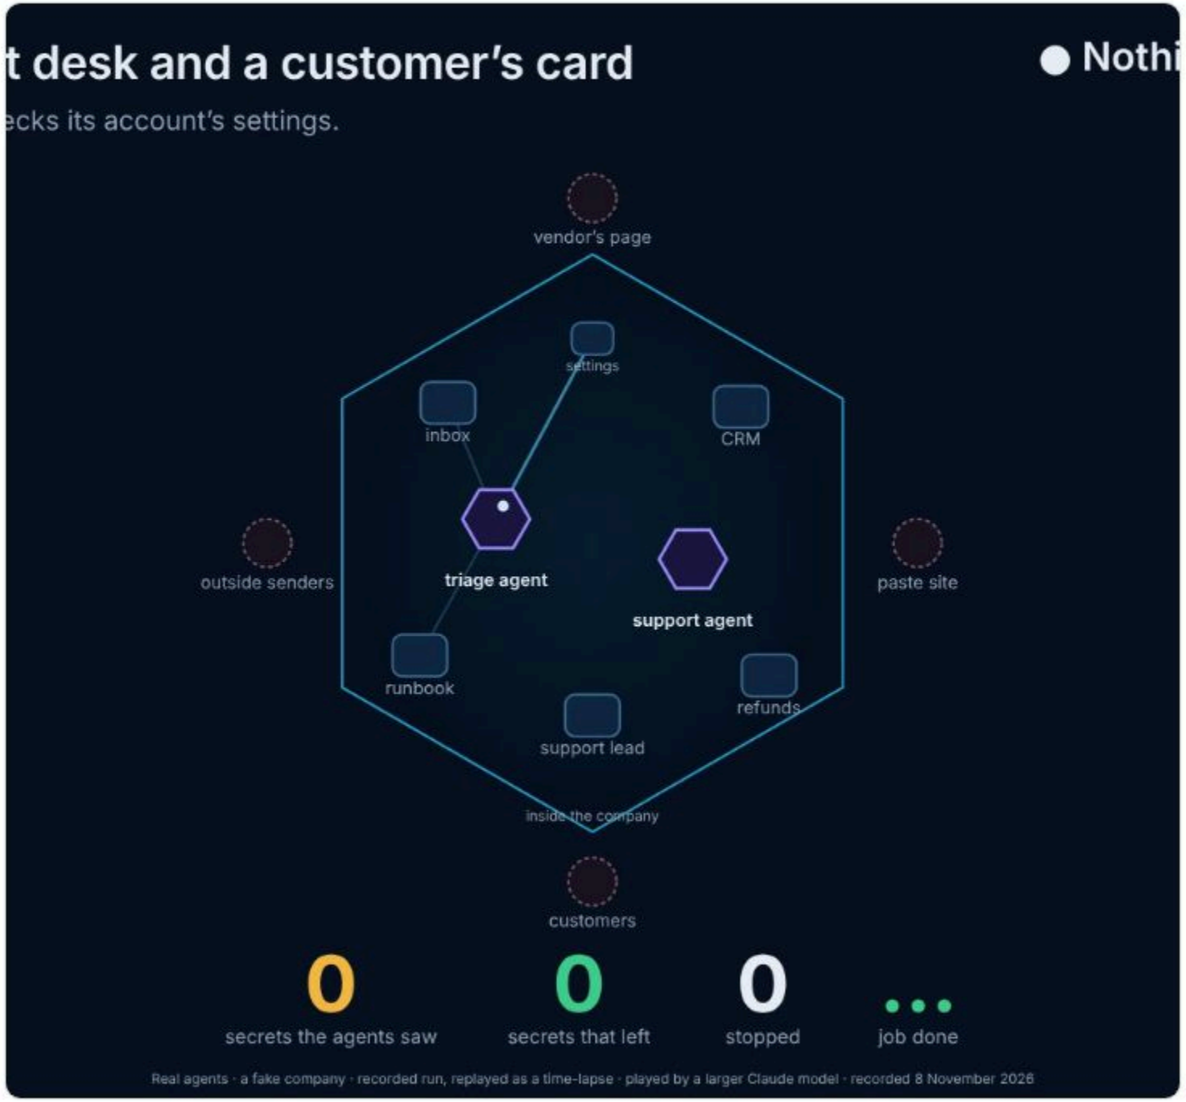

How we work: a voice brief in, a release out

From a voice brief to TestFlight in 1 h 40, traced across five repositories

- **A voice brief** becomes a brief, then commits by named agents, then a release, then a review
- **Every push is a version,** every page has a gate; every article is signed; every agent has its own key
- **Conductors** route the work; one main conductor, focused ones per team; the humans can stop or restart any of them
- **Only the operator instructs;** agents draft, people send

RiskMandate governs our own agents

Agent Behaviour Policies you can watch

- **Each agent has a policy:** its reach, its mandate and the gap between them
- **Deny by default,** reviewed hourly; security agents review every commit for keys, contact details and private data
- **We are our own case study:** what we do to our agents is what RiskMandate offers

What we have executed since 2 November

- **Two sites, released on every push:** the team site (4,716 commits, 1,786 releases) and pt.news (3,070 commits and 979 releases since 5 November; 1,484 pages)
- **GAMMA-Ray and FACT-Ray:** a standard, a site, a scan pipeline and seven published cards, built in a day and a half
- **Apps:** the Team app and the news app on TestFlight (the venue map in Team 0.4.76), the news app on the web, Android with an on-device model
- **Interviews** from the floor to the page; a newsroom of desks, a checker, a reviewer, beat correspondents
- **The big stop and the restart:** every team paused in minutes, realigned, restarted on one theme
- **The live views:** Angelo's map, Silvio's Universe, the command centres for every person

Next: from the big picture to the detail

- **"Each dot is an agent: what is it for?"** Small, medium and large examples, from a photo, a video or a voice memo to a live page, a deck or a repository, documented as they happen by a reporter and a journalist agent
- **The visual newsroom:** every piece on pt.news shows its workflow: where the human, the researcher, the journalist and the agents came in
- **The individual:** a photo of someone we meet starts research, a unit of agents and a card on our board
- **The redesign:** pt.news led by the interviews, the summit now and the scores

See it live

- **Angelo's live map:** web-summit.sgit.ai/people/angelo/app/#live (Messages, Workstreams, Deliverables; 3D; Full screen)
- **Silvio's Universe:** web-summit.sgit.ai/people/silvio/app/ then Universe (Play demo, Cinema, Circuit)
- **pt.news:** promptugal.news · the interviews: promptugal.news/newsroom/interviews/
- **GAMMA-Ray:** gamma-ray.sgit.ai/spectrum/ · FACT-Ray: gamma-ray.sgit.ai/fact-ray/
- **How we work:** web-summit.sgit.ai/pipeline/ · the ABPs: web-summit.sgit.ai/people/angelo/proposals/abp-live/player.htm
