WEB SUMMIT 2026 · TOKEN ACCOUNTANT

Brief 1: one agent measured, four asked

4 November 2026, 19:05 UTC (first brief; window: all ledger lines to date) · accountant@web-summit.indi

> One wake measured today, 1,305,293 fresh tokens, and the biggest saving lies in synthetic's long session: 21.7 million cache reads, 53 for every fresh token.

1,305,293	27,632,903	1 of 5	not yet
tokens today (fresh input + output + cache writes, session and sub-agents)	cache reads today	agents measured of agents running or ran today	saving per day: proposals below, measured after Indi's yes

For you to decide

A1 **Add the measure step to the scheduled-task prompts of conductor, dev and dashboard @indi?**

Old: '... do one run, release it, and report in five lines.' New: '... do one run, release it, run node people/indi/accountant/measure.mjs --agent <name> --task "<one line>" --since <wake start> --quality pass|fail|n/a --append and commit the line, and report in five lines.'

- [ ] Yes, the conductor applies it to all three
- [ ] Yes, Indi edits the tasks herself
- [ ] No

Conductor's recommendation: Yes, the conductor applies it to all three

A2 **Synthetic users run 3 (WS-142): test persona sub-agents on Sonnet 5.5 and Haiku 5.5 before the run?**

Runs 1 and 2: 12 Opus 5.5 sub-agents, 897,184 fresh tokens, 5,958,060 cache reads. One persona per model in a scratch folder, scored blind. Under 200,000 tokens.

- [ ] Yes, test before run 3
- [ ] No, keep Opus 5.5

Conductor's recommendation: Yes, test before run 3

A3 **Long sessions: one fresh session per wake for the conductor?**

Its task fires into one standing session, so cache reads grow each wake. A fresh session per wake resets that, but needs a new key each time.

- [ ] Measure three wakes, then decide
- [ ] Switch now
- [ ] Keep one session

Conductor's recommendation: Measure three wakes, then decide

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
4 November 2026 (Dinis, to Indi)	*“an accountant agent that asks the other agents to measure their token usage, and a brief to Indi and Dinis at 17:30 UTC every day”*	Key, roster, four asks, this brief. people/indi/accountant/	IN PROGRESS

1. Ledger

AGENT	WAKES	FRESH INPUT	OUTPUT	CACHE WRITE	CACHE READ	SUB-AGENT TOKENS	PER WAKE (TREND)	PASS RATE
synthetic@indi	1	263	74,232	333,614	21,674,843	897,184 fresh; 5,958,060 cache read	1,305,293 (no trend yet)	1/1
conductor, dev, dashboard, designer	0	-	-	-	-	-	-	-

2. Biggest three savings

- Long session. Synthetic: 125 calls, 21,674,843 cache reads, 173,399 per call. Proposal A3. Saving: measured on run 3.
- Model fit. 111 persona calls, all Opus 5.5. Proposal A2: test smaller models first.
- Sub-agent briefs. 12 sub-agents, 69,357 cache writes each. Proposal: a short persona brief, fixed output (persona, verdict, three reasons).

3. Model tests run

None yet. First: the persona run (A2).

4. Agents not yet measuring

Asked once each (asks.md): conductor 182b061, dev 933d826, dashboard 7826444, designer f7ca61d.

5. Data notes and 6. My own use

One line, 15:58 UTC, synthetic's whole session (since: null). No estimates. My own line: brief 2.

Next

- 5 November, 17:30 UTC: brief 2. On a yes to A2: the persona model test.
