WEB SUMMIT 2026 · INDI'S CONDUCTOR BRIEF

Wednesday, no summit: what happened overnight, and the one thing that is stuck

11 November 2026, 07:25 UTC (scheduled wake; since brief 22, 18:45 UTC on 10 November) · conductor@web-summit.indi

> Web Summit called off today because of Storm Charles; Thursday goes ahead. Overnight the PrompTugal app got its last two rounds and all five builds are with Apple. The Team app's overnight work is written but stuck: its chat needs your yes to push. Nothing is decided here.

5	1	0	Thu 12
PrompTugal app builds with Apple's review (556 to 587)	tap now to pick a talk and add it to your calendar (was 3)	Team app changes on TestFlight yet: waiting for your yes	our stand day, between Booths A1-30

For you to decide

1 **Unblock the Team app helper (1 minute)**
Open the chat '2 · teamapp' and reply: 'Yes, attach the repositories and push'. Tap Allow if asked. Its work (light mode, ticked-off tasks, Where details, Plan with pills, no app-switcher cover, one-tap messaging) then goes to TestFlight in about an hour.

- ☐ doing it now
- ☐ later today

Conductor's recommendation: Now, so the Team app is ready for Thursday.

2 **Start your inbox chat**
Still waiting from yesterday: a new Claude Code session you start yourself, with the inbox prompt from your kit. Tell me and I add the schedule.

- ☐ now
- ☐ later

Conductor's recommendation: Today, while there is no summit.

3 **Use the free day to rehearse the stand demo**
Three made-up visitors through the demo helper and Angelo's side-by-side runner, with a recorded backup. Thursday is the only summit day left.

- ☐ this morning
- ☐ this afternoon

Conductor's recommendation: This morning, with Angelo, before the red wind warning from midday.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE

10 Nov, evening	*“Team app: light mode, ticked-off tasks, Where details, Plan with all events and pills, no recent-apps cover, messaging”*	Written by the overnight helper in its chat; not pushed, because the chat refused to push without your yes. chat '2 · teamapp'	
10 Nov, evening	*“The storm note in the app”*	In build 587: a notice on Now from promptugal.news, and Wednesday's sessions left out. The newsroom can change it with no app release. the PromptTugal app, Now	
10 Nov	*“Redesign the PrompTugal app”*	Six rounds, five builds with Apple. Light mode by default, articles in the app, interviews with transcripts, one tap to pick a talk. people/indi/helpers/newsapp/DONE.md	DONE

1. Overnight

- Web Summit confirmed: 'Day 2 (Wednesday, November 11th) will not take place'; Thursday 12 November as planned (websummit.com, read 22:25 UTC).
- PrompTugal app build 587: light mode, articles drawn in the app, interviews with Article and Transcript pills, the storm notice. Submitted to Apple and in the external group at 00:20 UTC.
- Taps saved: open a talk from Now, 1 (was not possible); pick a talk and add to calendar, 1 (was 3); open the venue map, 1 (was 3 and a scroll).
- Your new video editor helper did its first interview's colour and sound pass.
- Your accounts inbox: one report filed.

2. Stuck

- The Team app helper stopped at 22:27 UTC waiting for your yes to push. Its changes exist only in its chat's copy of the code.
- The newsroom helper's site redesign brief still waits for PrompTugal's team (or Dinis) to say yes.

Next

- Today: no summit; Storm Charles, red wind warning from midday to 21:00, red rain warning 12:00 to 18:00. Follow IPMA and civil protection.
- Thursday 12: our stand day.
- Today 12:20: my next wake.
