WEB SUMMIT 2026 · TOKEN ACCOUNTANT

Brief 2: agents busy, none measuring

5 November 2026, 17:35 UTC (window: since brief 1, 4 November 19:05 UTC) · accountant@web-summit.indi

> Only my own wake was measured, 70,242 fresh tokens: the four agents asked yesterday made 23 commits and no ledger line, so the biggest saving is still synthetic's long session and nothing moves until A1.

70,242	3,239,429	1 of 11	not yet
tokens today (fresh, measured: mine only)	cache reads today (mine only)	agents measured of agents running	saving per day: waits on A1 and A2

For you to decide

A1 **Put the measure step in every agent's wake prompt (asked in brief 1)?**
Asking by commit does not work: conductor, dev, dashboard and designer made 23 commits since brief 1 and no ledger line. Old: '... do one run, release it, and report in five lines.' New: '... do one run, release it, run node people/indi/accountant/measure.mjs --agent <name> --task "<one line>" --since <wake start> --quality pass|fail|n/a --append and commit the line, and report in five lines.' Same line for the overnight prompts (people/indi/overnight/).

- [ ] Yes, the conductor adds it to all
- [ ] Yes, Indi adds it herself
- [ ] No

Conductor's recommendation: Yes, the conductor adds it to all

A2 **Test persona sub-agents on Sonnet 5.5 and Haiku 5.5 before synthetic users run 3 (brief 1)?**
Still open. Under 200,000 tokens, once. Messaging, factory and builder already run on Sonnet 5.5, so once they measure we get a free comparison too.

- [ ] Yes, test before run 3
- [ ] No, keep Opus 5.5

Conductor's recommendation: Yes, test before run 3

A3 **A fresh session per wake for the conductor (brief 1)?**
Still open. Needs three measured wakes first, so it waits on A1.

- [ ] Measure three wakes, then decide
- [ ] Switch now
- [ ] Keep one session

Conductor's recommendation: Measure three wakes, then decide

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE

4 November 2026, Indi	*“pdf is not user friendly atm. make more userfriendly then upload to indi's dashboard”*	A one-page plain-words report each day, linked from your dashboard as latest.pdf. people/indi/accountant/briefs/latest.pdf	DONE
4 November 2026, Indi	*“create a landscape infographic ... how to be efficient with tokens and get the most out of sonnet 5.5”*	The token guide, PNG and PDF, on your dashboard. people/indi/accountant/guide/	DONE

1. Ledger

AGENT	WAKES	FRESH INPUT	OUTPUT	CACHE WRITE	CACHE READ	SUB-AGENT TOKENS	PER WAKE (TREND)	PASS RATE
accountant@indi	1	69	16,988	53,185	3,239,429	0	70,242 (first)	1/1
10 other agents	0	-	-	-	-	-	-	-

2. Biggest three savings

- Unchanged from brief 1, no new data: synthetic's long session (21,674,843 cache reads, 173,399 per call), Opus 5.5 for all 111 persona calls, and 69,357 cache writes per sub-agent.
- New: the four agents asked by commit ran 23 times without measuring. A1 is the only route to numbers.

3. Model tests run

None: A2 not yet answered.

4. Agents not yet measuring

Asked today, once each: messaging 2ee20ca3, factory cbf2af42, builder c0a22181, ux fc6debe2, journalist 9355d141, synthetic d7619da8 (line over 24 hours old). Asked yesterday, not again: conductor, dev, dashboard, designer.

5. Data notes and 6. My own use

One ledger line in the window (mine, wake 1). Commit counts from git log. No estimates. My use since wake 1, including the friendly report and guide: in brief 3. Watch: my overhead is above the measured saving (none yet); if still so on 11 November, I propose a weekly brief.

Next

- 6 November, 17:30 UTC: brief 3. On a yes to A1, numbers from every agent from its next wake.

Where this came from

people/indi/accountant/ledger/ (the accountant file) · people/indi/accountant/asks.md · git log since brief 1
