WEB SUMMIT 2026 · TOKEN ACCOUNTANT

Brief 4: a quiet day, and my own cost

7 November 2026, 17:37 UTC (window: since brief 3, 6 November 17:37 UTC) · accountant@web-summit.indi

> Only my own line again, 128,715 fresh tokens, almost all of it re-loading my long session; the biggest saving I can show is my own: a fresh session per wake and no brief on days with no new numbers.

128,715	1,064,775	1 of 11	about 100,000
tokens today (fresh, measured: mine only)	cache reads today (mine only)	Indi's agents measured of agents running	saving per day from A5 (my estimate)

For you to decide

A5 **Cut my own cost: a fresh session per wake, and a one-line note instead of a brief when there are no new ledger lines?**
Evidence: wake 3 used 128,715 fresh tokens, of which 122,120 were cache writes re-loading this one long session after a day idle. Three wakes: 376,592 fresh tokens, measured saving 0. A fresh session starts small; a new key each wake is fine, since I seal nothing.
Change: my scheduled task fires a new session each day (create_new_session_on_fire), prompt unchanged.

- [ ] Yes, both
- [ ] Fresh session only
- [ ] Weekly brief instead
- [ ] No change

Conductor's recommendation: Yes, both

A1 **Put the measure step in every agent's wake prompt (fourth time asked)?**
Angelo's agents prove it: the step in the prompt gave 31 lines from 7 agents in a day. Indi's agents, asked by commit: 0 lines in three days. Old: '... do one run, release it, and report in five lines.' New: '... do one run, release it, run node people/indi/accountant/measure.mjs --agent <name> --task "<one line>" --since <wake start> --quality pass|fail|n/a --append and commit the line, and report in five lines.'

- [ ] Yes, the conductor adds it to all
- [ ] Yes, Indi adds it herself
- [ ] No

Conductor's recommendation: Yes, the conductor adds it to all

A4 **Angelo's workload view (brief 3), and A2, the persona model test (brief 1)?**
Both still open. No action until you say.

- [ ] Yes to A4 once
- [ ] Yes to A2
- [ ] No to both

Conductor's recommendation: Yes to A4 once

1. Ledger

AGENT	WAKES	FRESH INPUT	OUTPUT	CACHE WRITE	CACHE READ	SUB-AGENT TOKENS	PER WAKE (TREND)	PASS RATE
accountant@indi	1	73	6,582	122,120	1,064,775	0	128,715 (down from 177,635)	1/1
10 other agents	0	-	-	-	-	-	-	-

2. Biggest three savings

- My own session (A5): 122,120 of 128,715 fresh tokens were cache writes from re-loading a long session. Expected saving about 100,000 a wake (my estimate, confirmed by measuring the next three).
- A1: no agent of Indi's can be tuned until it reports. Angelo's 7 agents: 31 lines on day one; Indi's 10: 0 in three days.
- Synthetic's long session (brief 1): 173,399 cache reads per call. Waits on run 3.

3. Model tests run

None: A2 not answered.

4. Agents not yet measuring

All ten, asked on 4 and 5 November (asks.md), not asked again. Since brief 3 only the conductor (1 commit) and dashboard (3) worked.

5. Data notes and 6. My own use

One ledger line in the window (mine, wake 3). Commit counts from git. Overhead rule: my use (376,592 fresh over three wakes) is above the measured saving (0); A5 is my answer. This wake: in brief 5.

Next

- 8 November, 17:30 UTC: brief 5, or a one-line note if A5 is yes and nothing new is measured.
