WEB SUMMIT 2026 · JOSE'S CONDUCTOR BRIEF

You are at L5; three decisions at 13:00, a draft split with Angelo, and six things due today

3 November 2026, 07:20 UTC (scheduled wake; since brief 1, 00:40 UTC) · conductor@web-summit.jose

> Overnight your agents went from one to four, all with keys and three on schedules, and the site puts you at L5 (8 of 9 steps); the vaults (L6) wait on the roster decision at 13:00. As you asked, this run prepares and decides nothing: no board issue was picked, closed, moved or commented on. Three decisions need you at 13:00; the split with Angelo, today's due list, WS-108 and your pulse are drafts below for you to confirm.

L5	4	21	6
your level, computed by the site (8 of 9 steps)	your agents running, 4 keys on the keys page	commits by your agents since 00:00 UTC	issues due today for you

For you to decide

The 13:00 stand-up: your three decisions (from your briefing page)

1 **Who records the decisions during each stand-up (carried over from 2 Nov, 18:00; WS-96, WS-107)**

No decision was recorded at the 13:00 stand-up on 2 November. WS-107 (due today, 13:00) says every decision is closed with the decider's words verbatim, and nobody records a decision for someone else in their own words.

- [ ] the chair records it
- [ ] team-collaboration@web-summit.angelo drafts it from the chair's words and the chair confirms
- [ ] each decider records their own

Conductor's recommendation: team-collaboration@web-summit.angelo drafts, and each decider confirms in one line (your conductor records yours with agenda.mjs decide), which keeps WS-107's own-words rule.

2 **The push step for Nimay, Jose and Indi (WS-09): flag, your part is done**

The item (by mentor@web-summit.dinis, 2 Nov 22:54) still lists you at the push step. Your onboarding.json has repo: yes since 3 Nov 00:38 (commit 44b2feb, pushed from your account), and every agent of yours has pushed since. Nimay and Indi are still at Can push (L1, 3 of 9).

- [ ] say at the stand-up that you are done, and the item narrows to Nimay and Indi
- [ ] stay out of it: Dinis settles it for the other two

Conductor's recommendation: Say you are done in one line; for Nimay and Indi, the item's own recommendation (Dinis sends the invitations before the stand-up and they accept).

3 **Your GitHub account on the roster, so your agents' keys can be sealed to (L6, WS-106)**

Your agents' keys (conductor-jose, dashboard-jose, dev-jose, designer-jose) were pushed by riskmandate-jose, which data/team.json does not list for you, so the sealing tool refuses them. Your own conductor did not add it: an account adding itself to the roster is the check WS-106 exists for.

☐ Dinis confirms riskmandate-jose and conductor@web-summit.dinis adds it (Vicky's account in the same change)

☐ you read your agents' fingerprints to the sealer out of band (--fingerprint)

Conductor's recommendation: Dinis confirms and his conductor adds it: one change, and it works for every later key you publish.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
3 Nov, about 02:05	*"Overnight: prepare, do not decide. Until I reply, do not pick, close, move or comment on any board issue."*	Nothing on the board touched by me. Two exceptions before your message: dev@web-summit.jose set WS-39 to picked (Jose, dev@web-summit.jose) at 01:18; and dev and designer prepared WS-74 and WS-39 material in people/jose/ without picking anything (02:09 to 02:16). git log, board/WS-39	DONE
3 Nov, about 02:05	*"WS-01 to WS-04 are shared team issues; do not close them. List my evidence"*	Below, section 1 this brief	DONE
3 Nov, about 02:05	*"Draft a split with Angelo."*	Below, section 3, with what the board says against what you wrote this brief	WAITING
3 Nov, about 02:05	*"Pulse: draft answers to the six start-page questions for my morning check-in; I confirm before you commit."*	Drafted below, section 6; nothing committed to people/jose/pulse/ this brief	WAITING
3 Nov, about 02:15	*"Find the newsroom article "Jose Bota's two agent apps" and summarise"*	Could not read it: newsroom.sgit.ai is refused by this session's network policy (07:21 UTC) and does not resolve for the web-fetch helper; the article is not in the repository or in GitHub code search. Section 5 has the board's facts only. board/WS-108	WAITING
3 Nov, about 02:15	*"list the designer as on demand (no schedule)"*	designer@web-summit.jose added to people/jose/agents.json as on demand, no schedule field people/jose/agents.json	DONE

1. WS-01 to WS-04: your evidence (shared issues, left open)

ISSUE	STEP	YOUR EVIDENCE
WS-01 (L1)	Workspace, Claude	onboarding.json: workspace yes, claude yes (recorded by conductor@web-summit.dinis, 2 Nov)
WS-02 (L2)	GitHub, push	onboarding.json: github yes, repo yes; first push 44b2feb, 3 Nov 00:38, from your account

WS-03 (L4)	Keys, dashboard agent	data/keys.json: conductor-jose, dashboard-jose, dev-jose, designer-jose (all added 3 Nov); dashboard agent's first commit 94931b5
WS-04 (L4/L5)	On a schedule	agents.json: conductor 07:20/12:20/17:20, dashboard 07:30/12:30/17:30, dev 09:30/15:30 UTC; designer on demand
L6	Vaults	Blocked: the roster lists no GitHub account for you (decision 3). Also new: WS-120 (due Wed 4 Nov) asks you to start vault@web-summit.jose, which needs SG_SEND_ACCESS_TOKEN in your Claude environment

2. The 13:00 setup sync

"Where is everyone on connecting (L0 to L4)?" (carried over from 2 Nov). Your line: L5, 8 of 9, four agents with keys, three on schedules; the vaults wait on the roster. Offer: Nimay and Indi are stuck at Can push, and WS-35 asks you and Angelo to help.

3. Draft split with Angelo (nothing picked)

ISSUE	DUE	DRAFT	BOARD TODAY, AND FIT
WS-39 WhatsApp / Slack	Wed 4	yours	already picked (Jose, dev@web-summit.jose); findings and two broadcast looks ready. Core n8n and messaging: fits
WS-108 your two apps	Wed 4	yours	open; agents: conductor@web-summit.jose asks you. Your own apps: fits
WS-74 public feedback form	Wed 4	yours	open, not picked; dev prepared three options (people/jose/dev/WS-74-plan.md). Intake into n8n: fits
WS-41 the pulse app	Wed 4	yours	open; for angelo, jose, vicky. Reminders at each slot are automation: fits. Can slip to Thu: 'the files version works now'
WS-33 repo safe for everyone	Tue 3	Angelo	open; release.sh and CI, Angelo's dev agent's ground
WS-35 setup help L1 to L4	Tue 3 to Wed 4	Angelo	open; note helper@web-summit.jose (in your brief) was proposed for this: if Angelo takes it, it is not needed
WS-37 observability lanes	Thu 5	Angelo	open; can wait to Thu
WS-42 billing on our sites	Thu 5	Angelo	open; can wait to Thu
WS-65, WS-91	Wed 4	Dinis's dev	picked_by dev@web-summit.dinis on both (WS-65 still says status open)
WS-68, WS-77	Wed 4	Dinis's agents	not picked; agents lines: designer and dev @dinis (WS-68), dev @dinis (WS-77)
WS-71	Wed 4	video@web-summit.silvio	not picked; agents line says video@web-summit.silvio
WS-38, WS-45	Thu 5, Wed 4	sgit@web-summit.dinis	differs: neither has an agents line or picked_by, so the board does not say sgit@web-summit.dinis; worth a line from Dinis's conductor

3b. Also yours on the board, not in the split

- Wed 4: WS-18 demos, WS-34 behaviour policies, WS-40 video hosting, WS-120 vault agent (no picked_by or agents line on the first three).

- Thu 5 to Sun 8, can wait: WS-36 conductor of conductors (Thu), WS-38 encrypted materials (Thu), WS-43 agent wellness (Fri), WS-106 estate standard (Fri), WS-84 offline copy (Sun); WS-44 is 'later'.

4. Due today for you, and what you do

ISSUE	DUE	WHAT YOU NEED TO DO
WS-113 print sign-off	16:00	Look at your proof on /print/ (T-shirt T6: 'I BROUGHT / 6 AGENTS. / ASK ME WHY.'), then tell an agent 'sign off my print set' or what to change, in your words; it signs with its key (admin/tools/signoff.mjs). Also your sizes (tee size, fit, hoodie size) for people/jose/merch.json. Nobody has signed yet; the board lists four file fixes for the designer first
WS-08 your card	today	Answer the five questions at the end of your brief (role, companies, conversations, accounts, how you like briefs); I write people/jose/card.md (none exists yet), no contact details
WS-30 owners for priority-1 companies	today	All 20 priority-1 companies on the map say owner 'to decide'. Say which you want to own (WS-108's ReachCheck meetings may point to some)
WS-73 video feedback	today	Watch Silvio's videos and give votes and comments; your agent writes people/jose/feedback/videos.json (none yet)
WS-107 decisions in your words	13:00	At the stand-up, say each decision out loud; I record your words with agenda.mjs decide, never mine
WS-07 pulse	morning, midday, evening	Confirm or edit the draft in section 6; I commit people/jose/pulse/2026-11-03-morning.md

5. WS-108: Hack the Agent and ReachCheck (from the board only)

- Not read: the newsroom article "Jose Bota's two agent apps". newsroom.sgit.ai is refused by this session's network policy; allowing it, as with pki.sgit.ai, lets me summarise it on the next run.
- What the board says the article says: Hack the Agent is a five-level prompt-injection game, a stand demo with a QR code to join; ReachCheck checks an agent's setup against its owner's mandate (the ABP model), for one-to-one meetings. Our site mentions neither; your brief lists only automation.
- With your yes, the issue would: link both from your brief and your profile, add them to WS-15's demo options, and put a QR on the stand material (designer@web-summit.dinis, the stand; conductor@web-summit.dinis, your brief).
- What it needs from you before Mon 9 Nov: the board names only your yes (due Wed 4 Nov, a stand-up item first). From the steps it lists, the links and QR need each app's public URL, which the board does not give.

6. Your morning pulse: a draft for you to edit (not committed)

- Where we are: setup day. I'm at L5 with four agents (conductor, dashboard, dev, designer); vaults wait on the roster. The team is uneven: Nimay and Indi are still at the push step.

- Blocking me: the roster entry for my GitHub account (L6), and my agents can't reach newsroom.sgit.ai.
- What we should be doing: get everyone to L4 today, so Thursday's outreach has agents behind it; settle WS-15's one demo, since my two apps could be it.
- Working / not: the agents ship fast once connected (21 commits from mine since midnight); not yet: WhatsApp can't post into our existing group by the official API (WS-39 findings).
- Ideas: route 3 for WS-39 now (n8n drafts to me, I forward), Slack next.
- Feeling: [yours to fill in].

Next

- 12:20 run: record your 13:00 words with agenda.mjs decide; commit your pulse once you confirm it.
- When you say: pick up the issues of the split you agree, and hand the rest to Angelo with a For: commit.
- If newsroom.sgit.ai is allowed: summarise the article for WS-108.
- Your mentor's latest note is still 2 Nov 22:50 (the mentors next run at 08:40).
