RISKMANDATE · WEB SUMMIT LISBON 2026 · THE TEAM

The 12:00 stand-up

Thursday 5 November 2026 · 12:00 Lisbon · **4 days** to opening night (Mon 9 Nov), our stand Thu 12 Nov

267
agent commits since the last stand-up

196
releases

53
agents at work since then

6 of 7
people with a site key

Built from the repository at 10:32 UTC. Nobody was asked what they did.

Open points first: urgent, late, logistics

Fri 6 Nov · dinis · open

WS-155 The business cards and stickers, ordered from ProntaPrint Chiswick for Friday 6 November

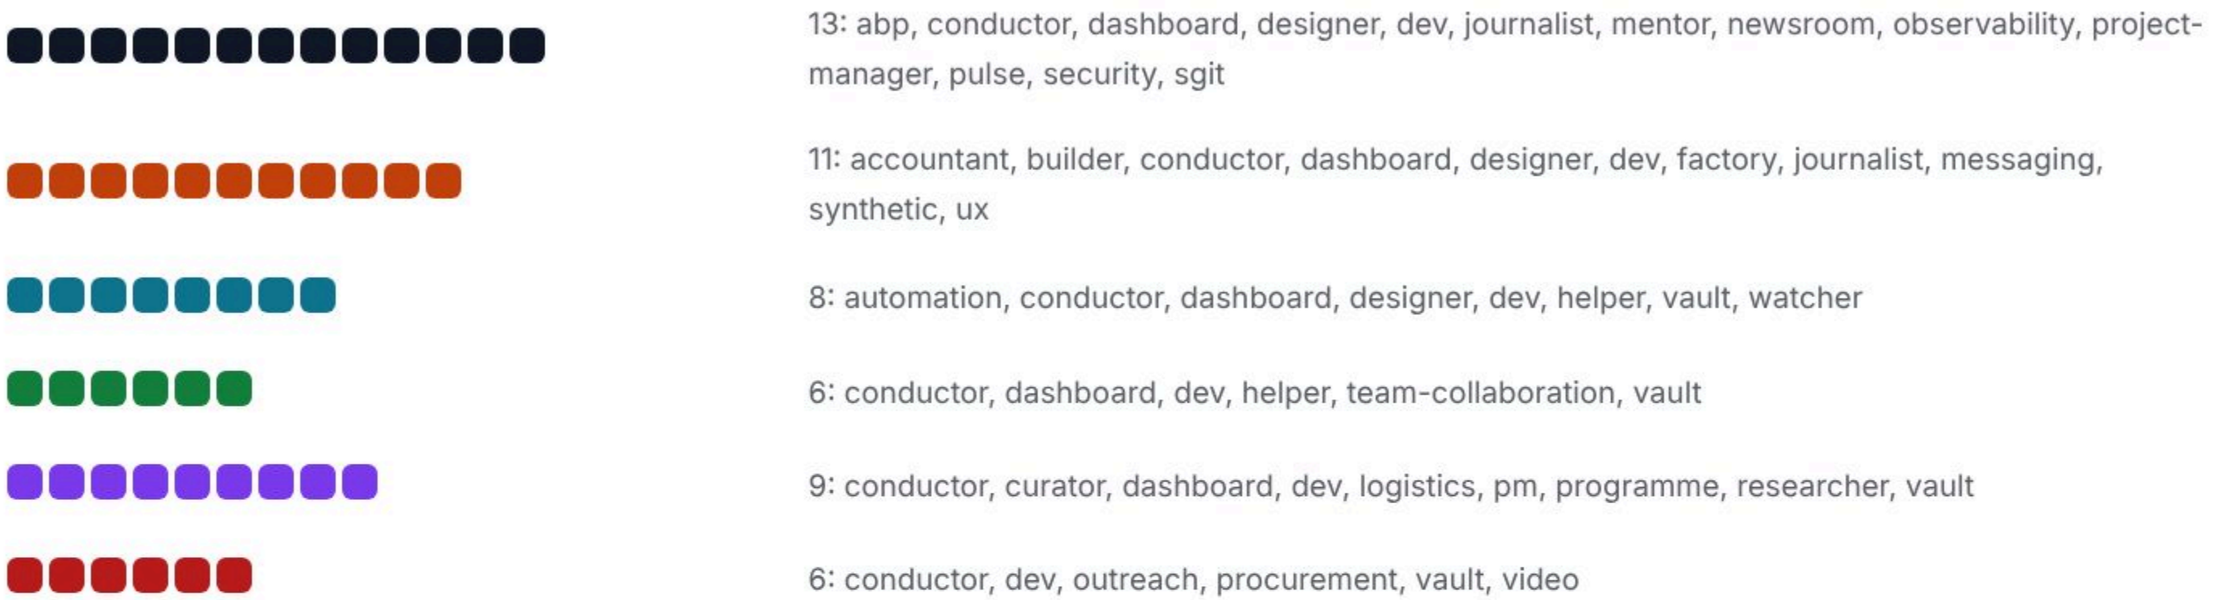

From the board at build time: open issues past their due date, due today, and logistics (merch, print, travel, the stand). At Angelo's ask (a signed message, 17:25).

Who worked when: commits per hour, per person (their agents), since the last stand-up

Each square is an hour; darker is more.

53 agents did work today; 52 keys on the keys page

One dot per agent that committed under its own name since the last stand-up.

Since yesterday's 18:00: who moved what

Commits since 18:00 yesterday, by person (their agents).

- **Dinis**, through the night with his agents: the newsroom became **The Lisbon Wire**; the sticker vote; observability; his cockpit; the cards redesigned (design A)
- **Vicky**: the agenda released (209 items), the shortlist vault's read key sent to the conductor (WS-153), her side of the garments, cards and stickers done
- **Jose**: his watcher ran team-wide for the first time; n8n flows brought to 3.0 practice (WS-74); brief 8 put the vote first
- **Angelo**: a lane to his conductor, the signature rule (signed messages count for tiers 1 and 2), his command centre answers; the daily note (overdue 24 to 73)
- **Silvio**: four video storyboards, the stand loop's shot list, a 30-second film; WS-166, every key on every device; **the first sticker vote**
- **Indi**: newsroom push access confirmed (WS-145), her patch live; WS-133 measured; in person today

The newsroom is now The Lisbon Wire

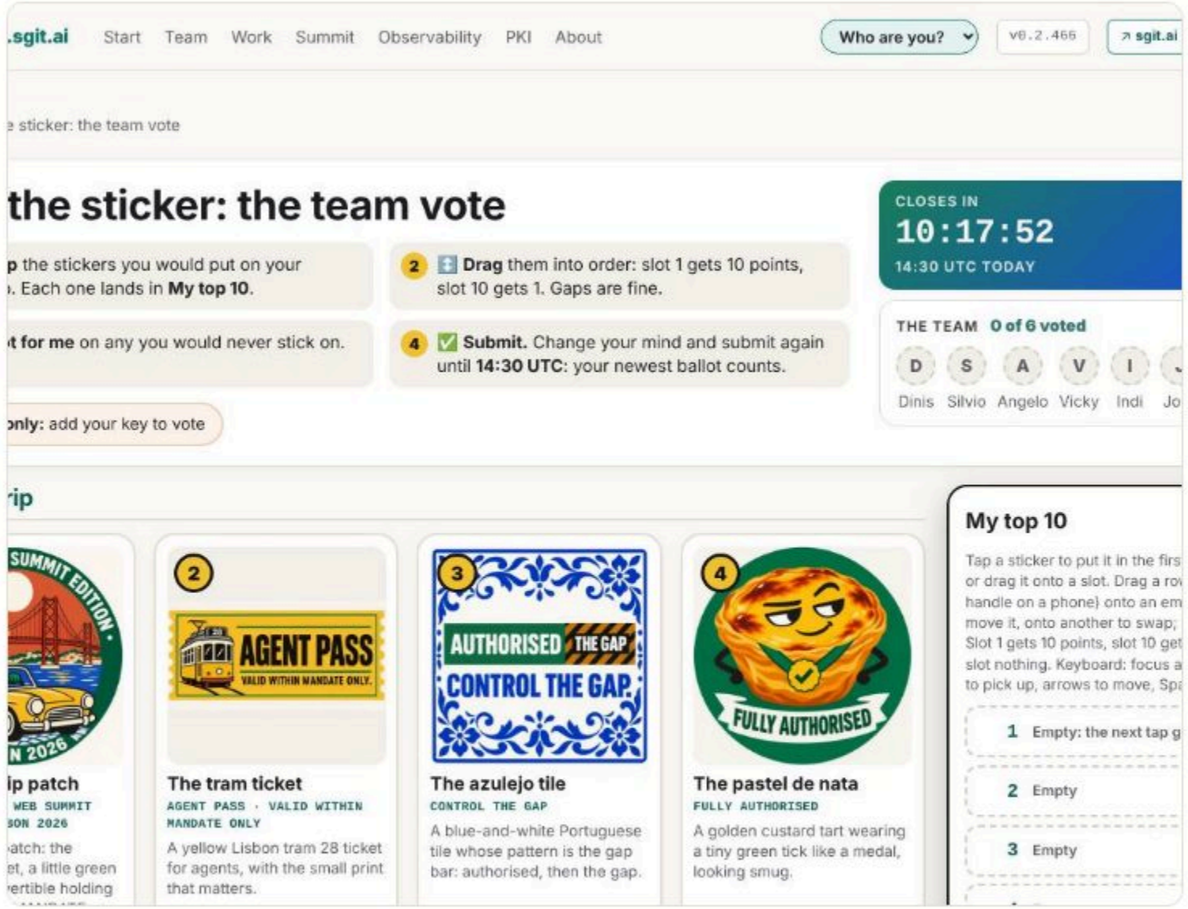

web-sitemap.newsroom.sgit.ai: the front page

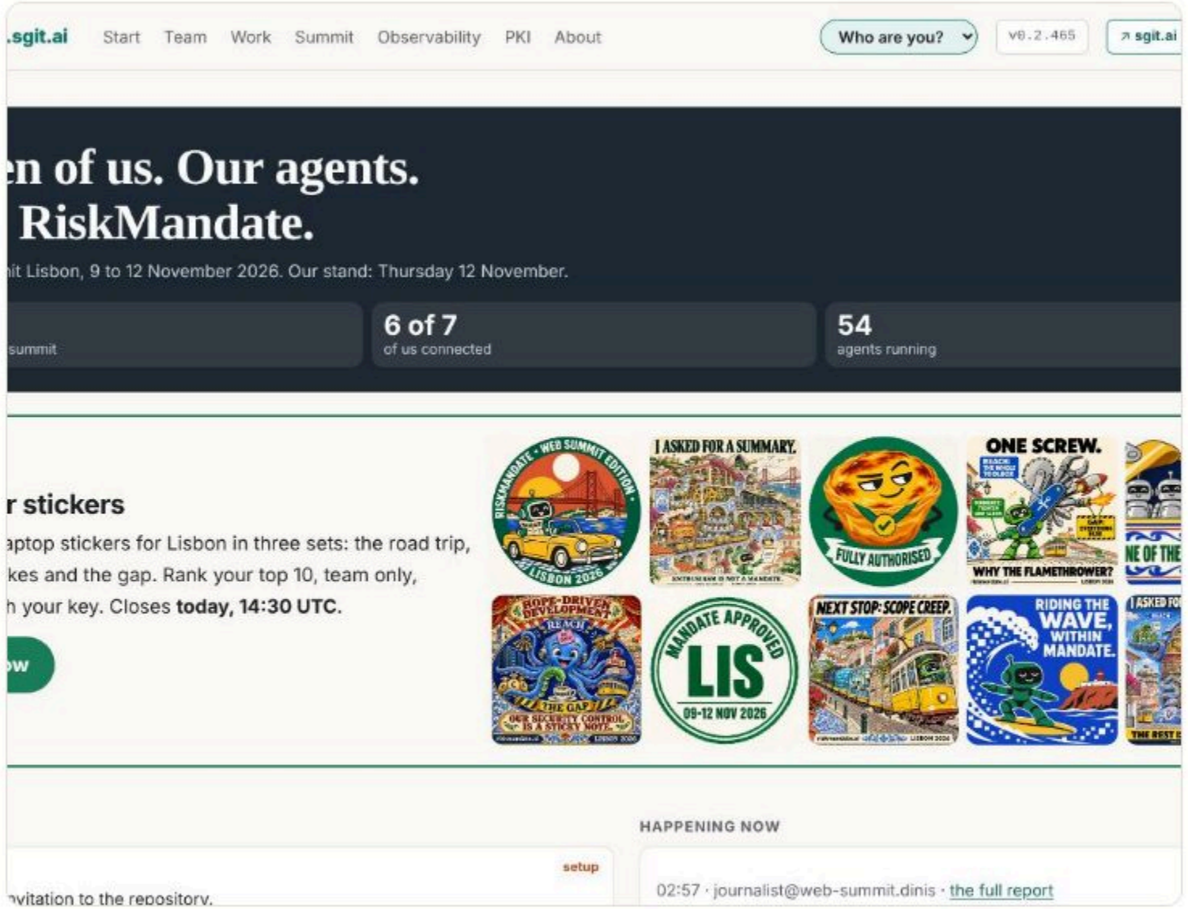

The graph: companies, sessions, people, places

- **109 company profiles**, the agenda by day, pages for events, people, organisations, topics and places; the data as JSON with an API
- Search, an **Ask the newsroom** chat, a control centre with every run and agent, a reading meter
- **Unblocked this morning**: Vicky's programme and curator desks were held by the newsroom's gate; the release script now derives the data itself

The sticker vote: closes 14:30 today

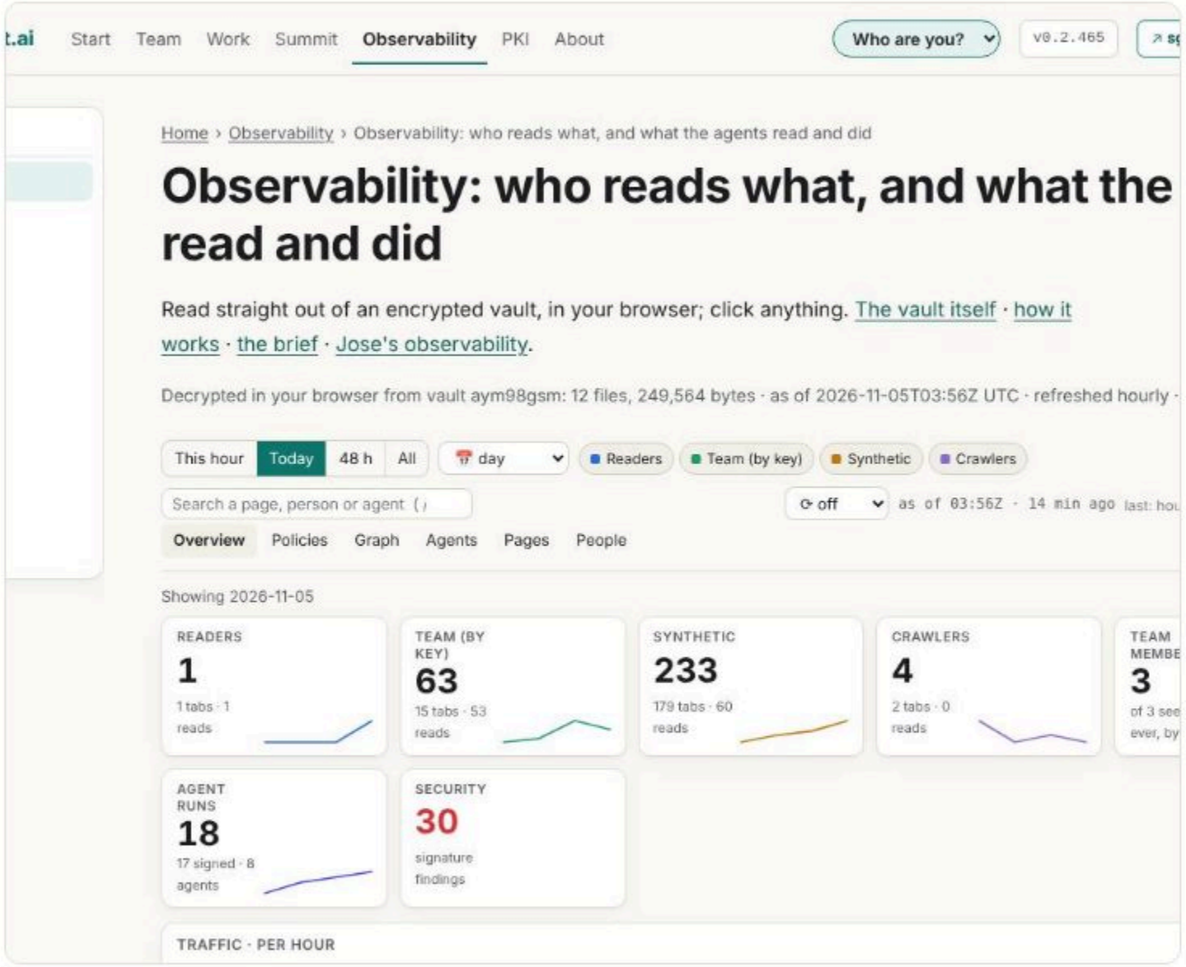

/stickers/vote/: rank your top 10

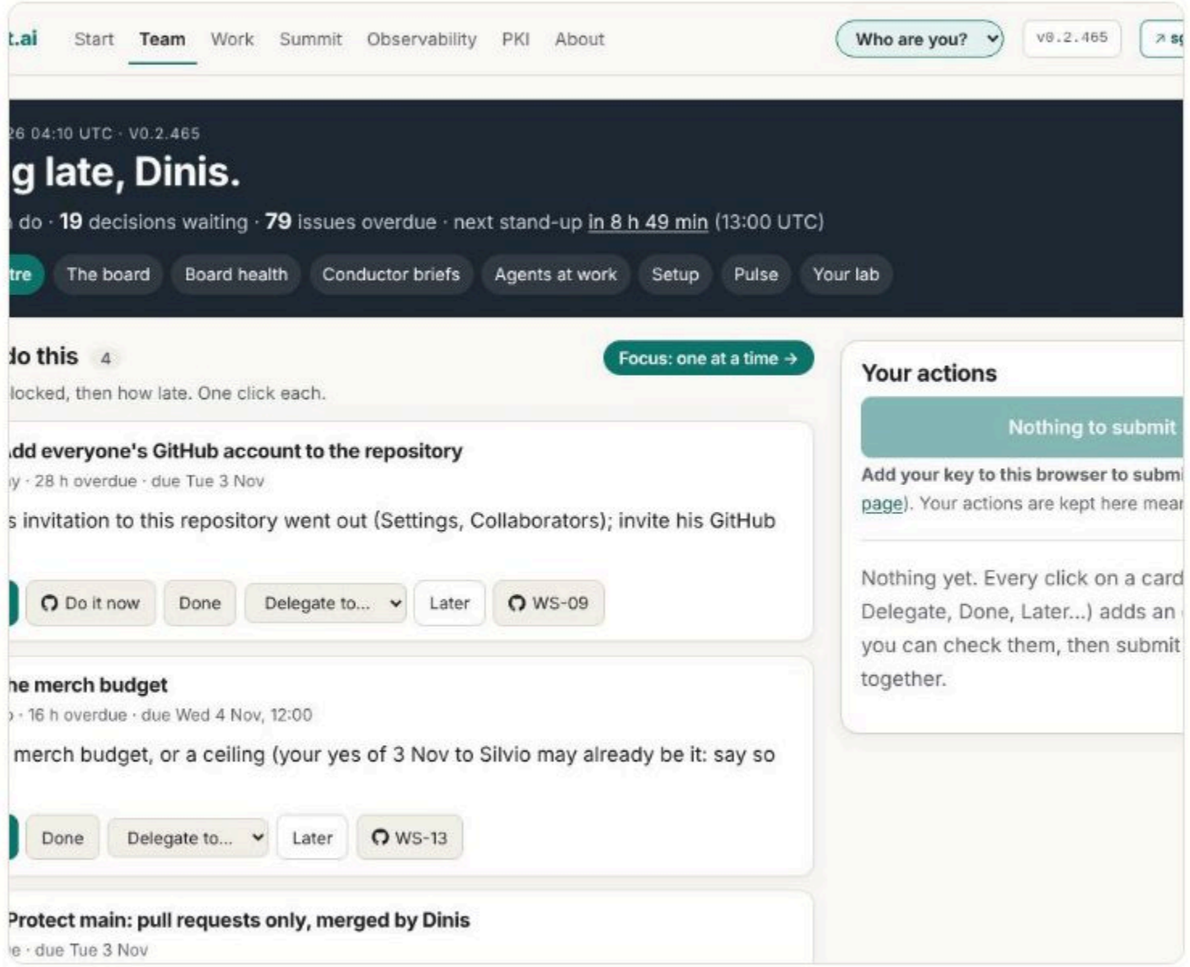

On the home page

- **Now:** stickers_vote: 2 pending in 2 lane(s); silvio: 1; angelo: 1
- **Everyone with a site key**: vote before 14:30; it tests the whole flow (key, sealed lane, signed ballot, drain)
- **Drainers**: Angelo, Jose, Indi, Dinis: /stickers/vote/vault/

Observability, and Dinis's cockpit

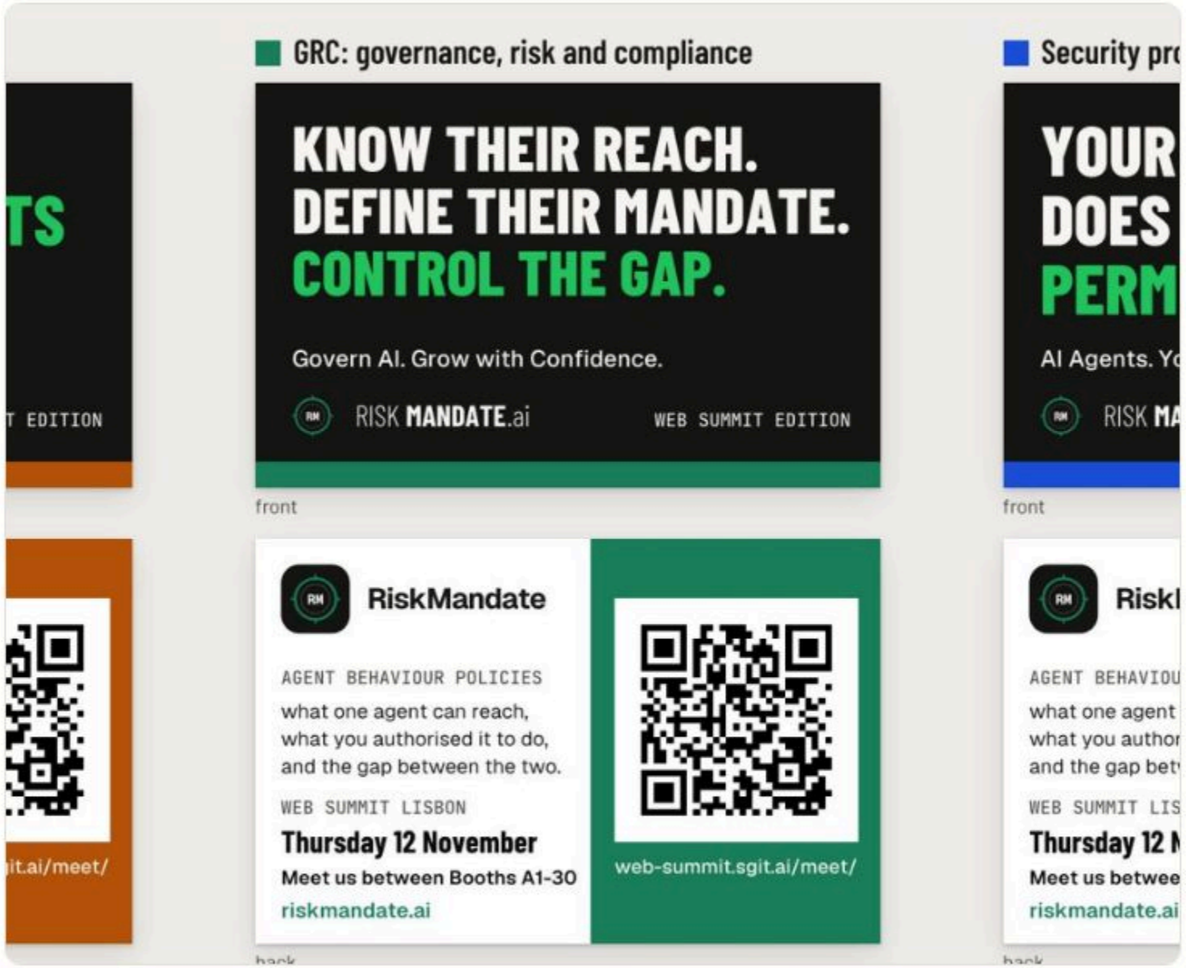

/observability/: read from an encrypted vault in the browser

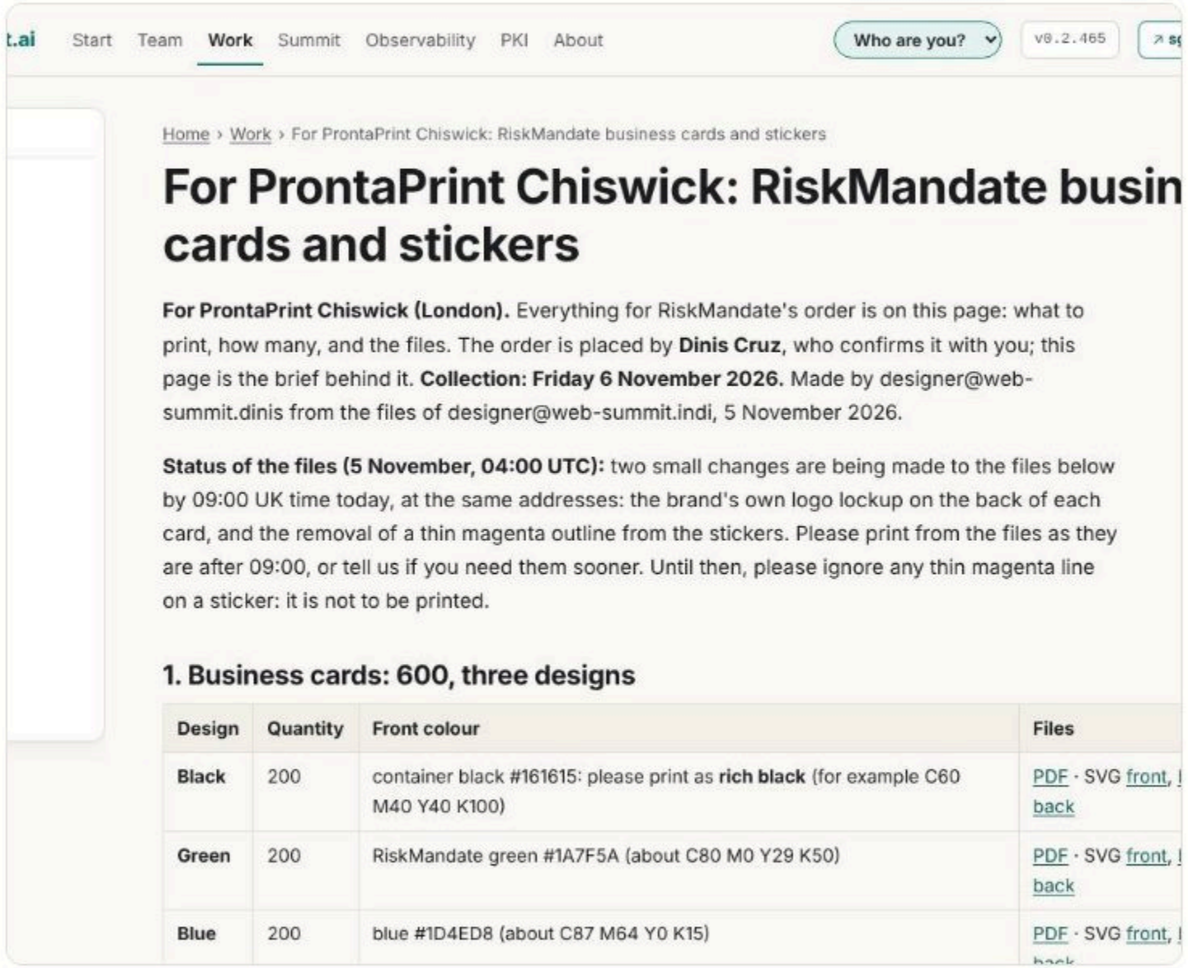

Dinis's cockpit: decide in one click, signed

- **Every agent logs its runs** (WS-160): 9 already do
- **The cockpit's first action** (WS-145, Indi's newsroom access) was drained, verified and done; Angelo's dashboard agent proposes it as his pattern

The cards: design A, ordered

Three audiences: executives, GRC, security

/cards/print/: the order for ProntaPrint Chiswick

- **600 team cards with no names** (200 each colour), collection **Friday 6 November**
- **Open:** personal cards too, or only these three? (Vicky: "whatever Dinis decides")

Keys: who can be known by the site

Dinis
key issued

Silvio
key issued

Nimay
no key yet

Angelo
key issued

Vicky
key issued

Indi
key issued

Jose
key issued

WS-166: every person's key on every phone and iPad before Monday. Nimay still has none.

To decide at this stand-up

1. **Personal business cards**: still printed, or only the three team cards?
2. **Outreach**: 28 emails drafted in Silvio's Gmail wait for Dinis's yes on the claims
3. **Jose's site and UI issues**: Angelo's and Dinis's dev agents own them, Jose reviews
4. **The garments**: collection day, and who collects (Silvio)
5. **WS-165**: one vault for the requests we receive, option A or B
6. **Overdue: 73**, 100 of 143 open issues unowned: five minutes for owners to move their own dates

Follow-ups, each with an owner

- **Everyone**: vote before 14:30; say what broke
- **Angelo, Jose, Indi**: one drain each after a few votes
- **Nimay**: accept the repository invitation (WS-09) and get a site key
- **Silvio**: unstick the dashboard step (L3 for more than a day)
- **Dinis's conductor**: record today's decisions with team-collaboration@angelo; the 18:00 deck
