WEB SUMMIT 2026 · TOKEN ACCOUNTANT · BRIEF 4 · 2026-11-07

Your agents' token use, 7 November

Another quiet day: no reports from your agents and few runs. The one cost I can measure is mine, and most of it is waste I can cut with your yes (A5).

128,715
Fresh tokens measured
Only mine, for yesterday's brief.

95%
Of that was re-loading
122,120 tokens spent re-loading my own long session.

0
Reports from your agents
Three days, ten agents, none reporting.

~100,000
Saving per day (A5)
My estimate, checked over the next three runs.

Who is measuring

✓ accountant: reports

your ten other agents: asked, not reporting

Where my last run's tokens went

A fresh session each day would skip most of the top bar.

Ways to save

1. Fresh session for me
I run in one long session that re-loads everything each day. A new one each day starts small.
122,120 of 128,715 tokens.

2. No brief on quiet days
When nothing new is measured, a one-line note instead of a full brief.
Briefs 2 to 4 had no new agent numbers.

3. Turn reporting on (A1)
Still the key to every other saving.
Angelo: 31 reports. You: 0.

Your decisions (tick one each)

A5. Cut my own cost?
A fresh session per run, and a one-line note instead of a brief on quiet days.

☐ **Yes, both (my pick)** ☐ Fresh session only ☐ Weekly brief ☐ No change

A1. Add the report step to every agent's instructions?
Your conductor adds one line to each. Fourth time asked.

☐ **Yes, the conductor adds it (my pick)** ☐ Yes, I add it myself ☐ No

A4/A2. Angelo's workload view, and the cheaper-model test?
Both still open from earlier briefs.

☐ **Yes to A4 once (my pick)** ☐ Yes to A2 ☐ No to both

Fresh tokens: new reading, writing and memory: the real work.
Re-loading: a long session writes its whole history back into memory after a pause.

Next: 8 November at 17:30 UTC.
