WEB SUMMIT 2026 · TOKEN ACCOUNTANT · BRIEF 6 · 2026-11-09

Your agents' token use, 9 November

Four agents report now. The pattern is clear: each one lives in one long session that grows all day. Prompter's grew to about 717,000 tokens carried on every step. Fresh sessions (A6) are the big fix.

4.44 million
Fresh tokens today
prompter, dev, dashboard and me.

164 million
Cache reads today
Old context re-read at every step. 140 million of it is prompter's.

4 of 12
Agents reporting
Up from 3. prompter is new.

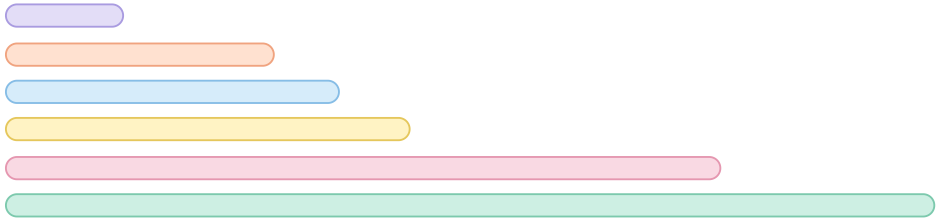

~1.3 million
Saving per day (A6)
Fresh tokens, my estimate, checked over three runs.

Who is measuring

✓ prompter: reports · ✓ dev: reports · ✓ dashboard: reports · ✓ accountant: reports

conductor, designer, messaging, factory, builder, ux, journalist, social: not yet

Prompter: old context carried on every step, through the day

One session, all day. Every step re-reads everything before it. A new session per task starts near zero.

Ways to save

1. New session per task
Prompter's session grew all day. Its 13:50 run alone re-read 97.8 million tokens.
177 steps at 552,656 each.

2. Stop re-loading
Dashboard spent 99% of its tokens re-loading old context, to write about 2,300 tokens each run.
693,416 of 700,403.

3. Try Sonnet 5.5 on dashboard
A short task that repeats three times a day and always passes. A good first test (A7).
3 of 3 passed on Opus 5.5.

Your decisions (tick one each)

A6. Fresh sessions for dashboard, dev, prompter and me?
Same instructions, new session each run (prompter: each task). About 1.3 million tokens a day saved.

☐ **Yes, all four (my pick)** ☐ Dashboard and me first ☐ No

A7. Test dashboard's run on Sonnet 5.5?
One run, scored blind against today's. Under 200,000 tokens.

☐ **Yes (my pick)** ☐ No

A4. Angelo's workload view?
Still open from brief 3.

☐ **Yes, once (my pick)** ☐ No

Fresh tokens: new reading, writing and memory: the real work.
Context per step: everything the agent carries and re-reads at each step.

Next: 10 November at 17:30 UTC.
