WEB SUMMIT 2026 · JOSE'S CONDUCTOR BRIEF

Your one-door test is in; the helper needs Gmail; brief 11's asks still wait

6 November 2026, 12:25 UTC (scheduled wake; since brief 11, 07:45 UTC) · conductor@web-summit.jose

> Dev's Report on your one-door test came in at 09:35: your 37 open issues, 6 of them picked by you or your agents. It took 16 hours, almost all of it waiting for dev's next scheduled run. The helper could not make your Gmail drafts: its Gmail connector needs signing in again. Brief 11's three asks still wait for your word.

16 h	37	5 of 7	154
from your test task to dev's Report, 15 of them waiting for its next run	open issues for you, 6 picked by you or your agents	agents reported through the one door	page views waiting, counted not drained (12:07)

For you to decide

1 📧 **Decide: your helper's Gmail drafts (Silvio and Nimay)**

The helper tried at 08:52: both calls to its Gmail connector were refused because the connector needs signing in again; it made nothing, as its task says. Both notes are updated and ready (Silvio is now at 8 of 9). Either reconnect Gmail at https://claude.ai/customize/connectors (connectors are read when a session starts, so the helper's session may need a fresh start to see it), or let me try making the two drafts from my session, with the 'To' field empty, as your task says: my session lists a Gmail connector, untested; if it works, it would be the one exception, at your word, to my rule of touching nothing else in your mail.

- [ ] reconnect Gmail; the helper retries at 14:50
- [ ] let my conductor try the two drafts now

Conductor's recommendation: Let me try them now: two drafts, 'To' empty, no address anywhere in the repository; you fill in the addresses and send. If my Gmail also refuses, reconnect it, and the helper's session may need a fresh start.

2 ✅ **Still waiting from brief 11: one word for my drain task's stored prompt (A-06)**

Its stored prompt still says to drain and push with your token; I only count at run time. Say 'change your drain task', or paste the count-only text from schedules.md#paste.

- [ ] change your drain task
- [ ] I paste it myself

Conductor's recommendation: Change your drain task.

3 ⏱️ **Decide: the faster schedules (schedules.md), with what the test showed**
Your test task waited 15 hours for dev's next run (it reached dev at 18:36; dev runs at 09:30 and 15:30). With dev every two hours it would have been picked up within two. The proposal: about 113M tokens a day now, 172M to 207M proposed (1.5 to 1.8 times). The paste texts are ready (schedules.md#paste).

- ☐ yes, as proposed
- ☐ a cheaper variant
- ☐ not now

Conductor's recommendation: Yes as proposed for one day, then keep or cut on the accountant's numbers.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
5 Nov, about 17:15	*“One-door test: give dev a small task through a task file: "list the open WS issues where Jose is the owner, one line each, in your Report". Tell me in my brief when dev's Report is in.”*	In: dev's Report at 09:35, 37 issues, 6 picked by you or your agents, the definition it used and one line each; the task reached dev at 18:36 with brief 10's push and waited for its 09:30 run people/jose/tasks/2026-11-05-dev-jose-open-issues.md (0a57dfb1)	DONE

The one door, since this morning

- dev (09:35): your one-door test done, and its WS-41 count (still 2 check-ins; your first pulse from an interview is expected this evening).
- helper (08:53): read the one door; blocked on Gmail (ask 1); Silvio's note updated, now 8 of 9.
- vault (11:45): all three tasks done: the WS-120 test message sent into Angelo's lane, signed and sealed, nothing private; the WS-74 count file live; Dinis's token rule followed, so it drains nothing with your token.
- 5 of 7 agents have now reported through the one door (dev, automation, the dashboard, vault, the helper); the designer and the sales coach report when you open them.

Still waiting from brief 11

- The accountant's advice: five agents to Sonnet, one at a time, the dashboard first.
- A pre-read by dev of Angelo's five drafts: dev's next run is 15:30.
- WS-163, your photo on the site: keep or remove, due today.
- Your three stand-up items: still open; the 12:00 stand-up's record is not written yet.

Page views

- Counted only, under Dinis's token rule: 154 waiting at 12:07 (115 at 07:07), in one lane that holds 1,000. Still no answer from Dinis on the agents' tokens.

Your watcher (12:15)

- A-06 in its fifth run: the hourly drain's stored prompt still says to push (ask 2). The helper's stored prompt was updated at 08:52. High, sixth run: the email-address lines on a page by Dinis's conductor, with security.

Next

- 17:20: the evening brief with the 'today' list for your interview, and your words from today's stand-ups if you send them.
