# Vicky's newsroom desks were stuck behind the gate: fixed; one vote is in (Silvio's)

Thursday 5 November 2026, 08:40 UTC · conductor@web-summit.dinis

155 agent commits and 124 releases since brief 17, most of them your night. This morning Vicky's programme and curator desks could not publish to the newsroom: its gate wants the derived data committed, and a desk agent writes only its own folder. Fixed: the newsroom's release script now derives the data itself, in a commit of its own (tested: a desk-only change goes red, then green). The sticker vote has one ballot waiting, Silvio's, which also proves his new key works; every conductor has your morning note asking for a vote before 13:00. My vote took the board number WS-159 an hour after Jose's conductor did; it is now WS-167.

| 155 | 1 of 6 | 73 | 0 |
|---|---|---|---|
| agent commits since brief 17 (22:35) | sticker ballots waiting (Silvio's); closes 14:30 UTC | overdue issues (24 yesterday), Angelo's daily note | messages in the conductor's inbox lanes |

## For you to decide

1 **Vote, and drain once before 14:30**

You are one of the four drainers. Vote at /stickers/vote/, then after a few ballots, /stickers/vote/vault/: open with full access, the lock (your SG/Send access token), Drain, the passphrase.

- [ ] vote and drain yourself
- [ ] vote; leave the drain to Angelo, Jose or Indi, or to me from the command line

Conductor's recommendation: Vote now; I drain from the command line at the 12:27 wake if nobody has, so the 13:00 sees a count.

2 **WS-165, the requests vault from your RiskMandate.ai agent: option A or B**

A: a requests/ folder in ws-issues-public, contact details in ws-crm-private. B: a new pair of vaults. Also: who creates it, and should each stand-up brief list the requests due.

- [ ] A
- [ ] B
- [ ] not now

Conductor's recommendation: A: no new keys; I list the due requests in each stand-up brief.

3 **Your RiskMandate.ai agent's public key, to open its channel**
/family/riskmandate-agent/: a vault each, a lane each way. Step 1 is its public key, handed to me by you; nothing moves until then.

- [ ] paste its public bundle here
- [ ] later

Conductor's recommendation: Ask it to read the page and make the key; paste the public half here.

## What you asked, and what was done

| WHEN | YOU SAID | WHAT WAS DONE | |
|---|---|---|---|
| 5 Nov, ~03:00 to 04:00 | *“the sticker vote: top 10, gaps, drag you can see, the vault on its own page, on the home page, closes 14:30”* | All live (v0.2.466 onwards); the vault key sealed to you as well. /stickers/vote/ | |
| 5 Nov, ~04:15 | *“an infographic ... everything that I've done ... call outs to the multiple agents and multiple humans”* | Your night in pictures, your agents' work only (82 commits, 16 agents), the latest cards, who needs to look at what. /nights/2026-11-05/ | DONE |
| 5 Nov, ~04:30 | *“write a note and a debrief ... for their conductor ... they all go and vote”* | One note per conductor (Angelo, Jose, Indi, Vicky, Silvio), each its own commit; Nimay's on the page. Angelo's and Jose's conductors have already routed theirs. /nights/2026-11-05/notes/ | DONE |
| 5 Nov, ~05:00 | *“a page on this website for briefing to other agents or other teams from our family, SGit ... and a communication channel with my agent at riskmandate.ai”* | /family/ with the sgit first-run feedback (point the sgit dev session at it) and the channel brief for your RiskMandate.ai agent. /family/ | |

## The team

### Vicky's agents
programme@ and curator@ held their 07:45 and 08:15 runs behind the newsroom's gate; the fix is pushed, they can release at their next run

### Silvio
his video@ agent wrote four storyboards and the stand loop's shot list; dev@ opened WS-166, every person's key on every device before Monday

### Jose
his conductor's brief 8 puts the vote first; his watcher ran team-wide for the first time

### Indi
newsroom push access confirmed (WS-145); her patch live

### Angelo
his dashboard agent proposes your cockpit as the pattern; the daily note: overdue tripled, decisions on you

## Next

- 10:27 wake: drain, the vote count, and the 13:00 deck and its PDF.
- 12:27 wake: drain the votes from the command line if nobody has, so the 13:00 sees a count.

## Where this came from

git log since 2026-11-04T22:35Z (dev), both repositories · stickers_vote.py status at 08:35 UTC · feedback_drain.py at 08:33 UTC
