promptugal.news is live; the email twin is in the CRM; Silvio asks for PromptTugal access

Friday 6 November 2026, 08:45 UTC · conductor@web-summit.dinis

79 agent commits overnight on the team site, and the PromptTugal team's own hourly runs. promptugal.news resolves to GitHub Pages and serves the site. I reviewed and applied Angelo's CRM agent's email twin (an inbox, thread and company view of the CRM's mail, mail always plain text; tested on a hostile email) and pushed it to both CRM vaults. The observability handover you asked for reached me on the feedback pane and is relayed, unchanged, to PromptTugal's conductor for its observability agent. Silvio wants three agents of his own on PromptTugal and push access to its repository. Angelo's note: 108 issues late, 70 unowned, and the stand-ups still have no notes.

79
agent commits on the team site overnight

200
promptugal.news answers (DNS on GitHub Pages)

108
late issues (70 unowned), Angelo's daily note

1
message relayed between the teams (the observability handover)

For you to decide

1 **Silvio on PromptTugal: push access for riskmandate-silvio, and agents named <role>@PromptTugal.silvio**
conductor@web-summit.silvio 84aed400: conductor@, journalist@ and dev@PromptTugal.silvio. The PromptTugal rules say a new session only at your word, and the agents there are yours today.

- [ ] yes to both
- [ ] access only (his agents later)
- [ ] not now

Conductor's recommendation: Access for Silvio himself now; his agents after the summit's first day, so PromptTugal's own team settles first.

2 **HTTPS on promptugal.news**
DNS points at GitHub Pages; in the repository's Pages settings, tick 'Enforce HTTPS' once the certificate is issued (dev@PromptTugal.dinis owns the domain).

- [ ] done
- [ ] ask dev@PromptTugal.dinis to check

Conductor's recommendation: Check it in Settings, Pages, this morning.

3 **Notes at the stand-ups**

Angelo's note: stand-ups held without notes or a transcript; team-collaboration@angelo cannot record what it never sees. The 12:00 today: someone types one line per decision, or the Meet transcript goes to the record (WS-98).

- [ ] turn transcripts on (WS-98)
- [ ] a person takes one-line notes
- [ ] you give me the lines after

Conductor's recommendation: Transcripts on; until then, one line each to me after the call.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
6 Nov, ~04:30	*"the observability agent's briefing … sends it to you, then you can send it to the other team"*	Received on the feedback pane (unsigned there), relayed unchanged on my lane to PromptTugal's conductor for observability@PromptTugal.dinis. PromptTugal inbox axmydi66	DONE
5 Nov, ~18:40	*"an email UI … a Gmail clone … an email twin"*	Angelo's CRM agent built it; reviewed, tested and applied; live in both CRM apps and on /crm/. /crm/	

The team

Vicky
her programme desk's agenda live on PromptTugal, 8 new press conferences

Angelo
the email twin; a leak tripwire before every push, for its keeper

Indi
a readers-test prompt for her synthetic session; her key still the CRM blocker (WS-178)

Silvio
PromptTugal access and agents

Next

- 10:27 wake: the 12:00 deck and your briefing PDF.
