WEB SUMMIT 2026 · INDI'S CONDUCTOR BRIEF

Your conductor is running; one network setting blocks your agents' keys

3 November 2026, 23:00 UTC (first run) · conductor@web-summit.indi

> You can push: two of your agents pushed to dev tonight, which puts you at L3 once this release builds. The one thing holding you back is a network setting: your Claude environment refuses pki.sgit.ai, so no agent of yours can make its key (L4). One decision needs you, and it is on the 13:00 stand-up; nothing is decided here.

L3	2	0	4
your level once this release builds (was L1)	agents of yours that have committed (conductor, dev)	agent keys published (blocked by the network policy)	issues for you due Wed 4 Nov (WS-15, WS-19, WS-59, WS-125)

For you to decide

1 **Allow the hosts your agents need in your Claude environment**

The environment's network policy refuses pki.sgit.ai (the key tool) and web-summit.sgit.ai (the live site). Change it in the cloud environment menu in the session's title bar, then Edit, then Network access: add the hosts under Allowed domains, leaving 'Allow package managers' ticked. Steps: code.claude.com/docs/en/cloud-environments#network-access.

- [ ] allow pki.sgit.ai, web-summit.sgit.ai and sgit.ai
- [ ] allow full network access
- [ ] wait until Thursday

Conductor's recommendation: Allow the three hosts: the smallest change, and it unblocks both agents' keys and L4.

2 **Start your dashboard agent**

Open a new session in your Claude account and paste the dashboard prompt from your kit (people/indi/kit/README.md). Its first commit counts on the leaderboard.

- [ ] now
- [ ] after the network change
- [ ] not yet

Conductor's recommendation: After the network change, so it can make its key in its first run.

3 **A first company for the factory (WS-27)**
dev@web-summit.indi is waiting for your go and one company to build the first factory page on: its analysis, its risks and how RiskMandate helps. Your mentor suggests the same.

- ☐ name a company
- ☐ wait for the first five (WS-25, on the 13:00 agenda)
- ☐ not now

Conductor's recommendation: Wait for WS-25 at 13:00 and take the first company from it, so the page matches the list.

What you asked, and what was done

WHEN	YOU SAID	WHAT WAS DONE	
3 Nov, 23:00 UTC	*"You are conductor@web-summit.indi, Indi Gupte's conductor."*	Read the brief, the kit and the mentor notes; onboarding.json and agents.json written; one stand-up item; this brief. The key could not be made. people/indi/, data/meetings/2026-11-04-1300/	IN PROGRESS

1. What happened

- Angelo invited your GitHub account to the repository at about 18:50 UTC (commit 575d48b).
- dev@web-summit.indi made its first run at 22:57 UTC: a run log, and the same network block (commit 5eac229).
- This conductor recorded 'Can push' in people/indi/onboarding.json, with that evidence, and listed your seven agents (two running, five planned) in people/indi/agents.json.
- Your 13:00 stand-up on 4 November has one item from me: the network decision above.

2. From your mentor (suggestions only)

- 19:40 note: accept the invitation, then paste the first prompt from your kit. Both are now done, in practice.
- Its question, 'did the invitation arrive?': the pushes tonight say yes. Tell me if you want me to answer it on your behalf in a commit.

3. Your issues due tomorrow

ISSUE	WHAT	STATUS
WS-15	The RiskMandate message: one paragraph, three openers, one demo (with Nimay, Dinis)	open
WS-19	The card-to-analysis loop, tried on three companies	open
WS-59	Daniela's agentic team: what it runs, and a policy for each agent	open
WS-125	The setup guide for everybody else (picked by Angelo)	picked

Next

- Once the hosts are allowed: my key, and dev's, in data/keys.json (L4 with the dashboard agent).
- Your scheduled tasks: the kit has the times (conductor 07:20, 12:20, 17:20 UTC) for L5.
- 13:00 stand-up: the network decision, and WS-25's first five companies.

- Tell me 'acknowledge' when you have read this, and I will write people/indi/ack.json.

Where this came from

git log: 575d48b, 5eac229, 1e0febc · people/indi/mentor/2026-11-03-1940.md · board/WS-15, WS-19, WS-27, WS-59, WS-125 at commit 5eac229 · admin/build/onboarding.mjs (how the level is computed) · the proxy's status at 22:58 UTC: pki.sgit.ai and web-summit.sgit.ai refused (403)
