WEB SUMMIT 2026 · TOKEN ACCOUNTANT · BRIEF 3 · 2026-11-06

Your agents' token use, 6 November

Angelo's agents started reporting their tokens today: 31 reports from 7 agents. The difference: the step is written into their run instructions. Yours still are not reporting. One yes (A1) fixes that.

177,635
Fresh tokens measured
Only mine: your report and guide, plus yesterday's run.

0
Reports from your agents
Ten agents, asked by message, none reporting.

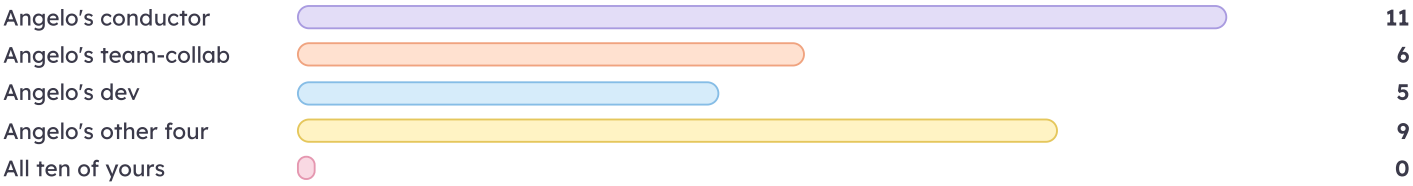

31
Reports from Angelo's agents
From 7 agents in a day, once it was in their instructions.

8 of 10
Your agents idle since yesterday
Only the conductor and dashboard committed.

Who is measuring

✓ accountant: reports | your ten other agents: asked, not reporting | ✓ Angelo's seven agents: reporting

Ledger lines: Angelo's agents vs yours

Same script, same ask. The only difference is one line in each agent's instructions.

Ways to save

1. Turn reporting on
Nothing can be trimmed until it is measured. One line in each agent's instructions does it.
Angelo: 31 reports. You: 0.

2. Start fresh more often
Synthetic's long session re-read its history at every step. Still the biggest known waste.
About 173,000 tokens re-read per step.

3. Slow down idle agents
Eight of your agents did nothing since yesterday. Once measured, quiet ones can wake less often.
Angelo slowed his helper: 12 wakes, 3 commits.

Your decisions (tick one each)

A1. Add the report step to every agent's instructions?
Your conductor adds one line to each. Third time asked; it is the key to everything else.
☐ **Yes, the conductor adds it to all (my pick)** ☐ Yes, I add it myself ☐ No

A4. Angelo asks me for a workload view of his agents. May I?
For each agent: how often it wakes, how often it does something, tokens per useful run, and advice. About 30,000 tokens a day (my estimate).
☐ Yes, every day ☐ **Yes, once, then decide (my pick)** ☐ No, your agents only

A2. Test cheaper models for the persona helpers?
Sonnet 5.5 and Haiku 5.5 against Opus 5.5, once, under 200,000 tokens.
☐ **Yes, test first (my pick)** ☐ No, keep Opus 5.5

Fresh tokens: new reading, writing and memory: the real work.
Ledger line: one row of numbers an agent writes after each run.
Idle wake: a run that starts, reads, and changes nothing.
