WEB SUMMIT 2026 · TOKEN ACCOUNTANT

Brief 3: Angelo's agents measure, Indi's do not

6 November 2026, 17:37 UTC (window: since brief 2, 5 November 17:35 UTC) · accountant@web-summit.indi

> Only my own line again, 177,635 fresh tokens; Angelo's seven agents wrote 31 ledger lines once the step was in their prompts, so A1 is still the biggest saving waiting, with synthetic's long session next.

177,635	5,914,918	1 of 11	not yet
tokens today (fresh, measured: mine only, since 4 Nov 19:12)	cache reads today (mine only)	Indi's agents measured of agents running	saving per day: waits on A1

For you to decide

A1 **Put the measure step in every agent's wake prompt (third time asked)?**
Angelo's agents prove it: the step in the prompt gave 31 lines from 7 agents in a day. Indi's agents, asked by commit: 0 lines in two days. Old: '... do one run, release it, and report in five lines.' New: '... do one run, release it, run node people/indi/accountant/measure.mjs --agent <name> --task "<one line>" --since <wake start> --quality pass|fail|n/a --append and commit the line, and report in five lines.'

- [ ] Yes, the conductor adds it to all
- [ ] Yes, Indi adds it herself
- [ ] No

Conductor's recommendation: Yes, the conductor adds it to all

A4 **Angelo asks for a workload view of his scheduled agents (c7de3717), relayed by your conductor: may I do it?**
Per agent: wakes a day, how many did something, tokens per useful run, and advice (add, keep, slow down, remove). His first question: does he need more dev agents? His ledger already has the numbers. Cost: about 30,000 tokens a day by my estimate, inside my budget. His runner writes a stopgap table meanwhile.

- [ ] Yes, add it to the daily brief
- [ ] Yes, once, then decide
- [ ] No, Indi's agents only

Conductor's recommendation: Yes, once, then decide

A2 **Test persona sub-agents on Sonnet 5.5 and Haiku 5.5 before synthetic users run 3?**
Open since brief 1. Under 200,000 tokens, once.

- [ ] Yes, test before run 3
- [ ] No, keep Opus 5.5

Conductor's recommendation: Yes, test before run 3

1. Ledger

AGENT	WAKES	FRESH INPUT	OUTPUT	CACHE WRITE	CACHE READ	SUB-AGENT TOKENS	PER WAKE (TREND)	PASS RATE
accountant@indi	1 (+ Indi's ask)	89	32,007	145,539	5,914,918	0	177,635 (up: two jobs in one line)	1/1
10 other agents	0	-	-	-	-	-	-	-

2. Biggest three savings

- A1, measuring itself: no agent of Indi's can be tuned until it reports. Evidence: Angelo's 31 lines vs Indi's 0.
- Synthetic's long session (brief 1): 173,399 cache reads per call. Waits on run 3.
- Idle wakes: since brief 2, conductor made 6 commits and dashboard 4; dev, designer and six others made none. Once they measure, any wake that does nothing is a candidate to slow down, as Angelo did with his helper (12 wakes, 3 commits).

3. Model tests run

None: A2 not answered.

4. Agents not yet measuring

All ten. Asked 4 Nov: conductor, dev, dashboard, designer. Asked 5 Nov: messaging, factory, builder, ux, journalist, synthetic (asks.md). Not asked again. A3 (fresh conductor sessions) waits on A1.

5. Data notes and 6. My own use

One ledger line in the window (mine, 5 Nov 17:36, covering Indi's report and guide and wake 2). Commit counts and Angelo's line counts from git. My use is above the measured saving (none) for a second day; review on 11 November. This wake: in brief 4.

Next

- 7 November, 17:30 UTC: brief 4.
